ES EXECUTIVE SUMMARY

This report evaluates potential traffic impacts due to development of the 656 dwelling unit Quarry Creek Master Plan. The Quarry Creek Master Plan also includes 1.5 net acres of community facilities that might include a day-care, and a 0.9 acre park and ride lot.

The project is expected to generate 5,578 average daily vehicle trips, 469 AM peak hour trips (121 inbound; 348 outbound), and 572 PM peak hour trips (386 inbound; 186 outbound). External trips have been adjusted down slightly to account for a transit reduction for planning area R-1, R-2, and R-3, which will be within one-fourth mile of transit service. The transit reduction decreases average daily vehicle trips by 2.8% and AM / PM peak hour trips by 2.6%.

The project is located in northern Carlsbad and will have access from Marron Road, which currently extends through the Quarry Creek Shopping Center from College Boulevard and Haymar Drive in the City of Oceanside.

This traffic analysis was conducted for Existing Conditions, Project Plus Existing Conditions, Near-Term and Near-Term Plus Project Conditions, Buildout and Buildout Plus Project Conditions.

The Existing Conditions, Project Plus Existing Conditions, Near-Term and Near-Term Plus Project Conditions evaluations were conducted assuming the current existing street network without the future extensions of Marron Road to the west to connect with El Camino Real, and without the State Route (SR) 78 / Rancho Del Oro Road interchange, and the Rancho Del Oro Road extension to Marron Road.

The Buildout and Buildout Plus Project Conditions were evaluated for two street network alternatives:

<u>Alternative 1</u> – This street network assumes all roadways that are included in the City of Carlsbad and City of Oceanside General Plan Circulation Plans. This street network assumes the extension of Marron Road from the existing east end at the Quarry Creek Shopping Center property line, to the existing west end approximately 1,000 feet east of El Camino Real, all within the City of Carlsbad.

<u>Alternative 2</u> – This street network assumes the Rancho Del Oro Road interchange at SR-78 is constructed, but the Marron Road extension is not included, nor is the Rancho Del Oro Road extension to Marron Road.

Significance Thresholds

In order to determine if the project would have a significant traffic impact on roadway segments or intersections, both the SANTEC / ITE Guidelines and the City of Carlsbad Growth Management Plan Circulation Performance Standard were used.

- 1. If the addition of project traffic to a roadway segment or intersection causes the level of service to decrease from "D" to "E" or "F", then the project is considered to have a significant impact.
- 2. If a facility is at level of service "E" or "F" before the addition of project traffic, then the following changes are allowed:
 - Roadway Segments An increase in the volume to capacity (v/c) ratio based on average daily traffic volumes, of no more than 0.02 is acceptable. However, a segment peak hour analysis must be completed under project conditions to determine peak hour significance of project impacts. A decrease in segment average travel speed of greater than one mile per hour indicates a significant impact.
 - Intersections An increase in delay of no more than 2.0 seconds is acceptable.
 - Freeways An increase in volume to capacity (V/C) ratio of no more than 0.01 is acceptable.

Provided below are conclusions and recommendations that describe project traffic impacts and possible mitigation.

ES.1 EXISTING CONDITIONS

Street Segments Within Oceanside

Of the 18 study area street segments in Oceanside only two segments currently operate deficiently:

• Vista Way between College Boulevard and the SR-78 westbound ramps.

Mitigation: The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that overriding considerations should be adopted.

• Lake Boulevard between Thunder Drive and Sundown Lane, at LOS "E".

Mitigation: Widen to a 4-lane Secondary Collector with two-way left turn lane. However, the Oceanside Circulation Element Update Final EIR recommends retaining this segment as two lanes and adopting Overriding Considerations, due to an agreement between the City and the residents to maintain this as a two lane road with a two-way left turn lane pocket.

Street Segments Within Carlsbad

Of the 11 roadway segments evaluated in Carlsbad, no segments evaluated operate deficiently during the AM and PM peak hours, as required by the City's Growth Management Plan.

Intersections

Within Oceanside, 14 intersections were evaluated and none currently operate deficiently.

Within Carlsbad, five intersections were evaluated and none currently operate deficiently.

State Route 78 Mainlines

Four segments of State Route 78 were evaluated, and one currently operates at level of service "E" during peak hours.

• El Camino Real to College Boulevard (LOS "E").

<u>Mitigation:</u> Regional SR-78 studies are currently being conducted by SANDAG / Caltrans, and improvements to add High Occupancy Vehicle (HOV) lanes have been included in the Year 2050 Regional Transportation Plan.

ES.2 PROJECT PLUS EXISTING CONDITIONS

The Project Plus Existing Conditions were evaluated for significant impacts due to the addition of project traffic to existing conditions volumes.

Street Segments Within Oceanside

Two segments in Oceanside would have significant direct project impacts:

• College Boulevard, between Vista Way and Plaza Drive. (Project Responsibility – 100%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of this segment of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way, between College Boulevard and the SR-78 westbound ramps. This segment is at level of service "E" under existing conditions and with project traffic added. The project change in volume to capacity ratio is greater than 0.02, at 0.041, so this would be a significant impact. (Project Responsibility – 100%)

<u>Mitigation Recommendation</u>: The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Street Segments in Carlsbad

Project traffic impacts would be less than significant.

Intersections

Project traffic impacts would be less than significant at intersections within Oceanside and Carlsbad.

State Route 78 Mainlines

Project traffic impacts would be less than significant to State Route 78 segments evaluated.

ES.3 NEAR-TERM PLUS PROJECT CONDITIONS

The Near-Term cumulative impacts from other approved and reasonably feasible pending projects that are expected to influence the study area at approximately the same time frame as the Quarry Creek project were evaluated without and with project traffic added.

No additional significant project impacts were identified for this condition beyond those previously discussed in prior sections of this report.

Street Segments Within Oceanside

Five street segments in Oceanside would operate deficiently at level of service "E" or "F", and three segments would have a significant direct impact.

• El Camino Real between Vista Way and the SR-78 westbound ramp, level of service "E", but project impacts are less than significant.

 College Boulevard between Vista Way and Plaza Drive, level of service "F", the project impact is a significant direct impact.
 (Project Responsibility – 45.8%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of segments of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial. This reclassification would mitigate the project significant impact. However, the Oceanside Update considers roadway reclassification infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way between College Boulevard and the SR-78 westbound ramps, at level of service "F", the project impact is a significant direct impact.

(Project Responsibility – 25.5%)

<u>Mitigation Recommendation:</u> The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Lake Boulevard between Thunder Drive and Sundown Lane, at level of service "F", but the project impact is less than significant, so no project mitigation is required.

Street Segments Within Carlsbad

Of the 11 roadway segments evaluated in Carlsbad, no segments evaluated operate deficiently during the AM and PM peak hours, as required by the City's Growth Management Plan.

Intersections

One intersection is Oceanside would operate deficiently, at level of service "E" during the PM peak hour, but the project impact is less than significant.

• El Camino Real / Vista Way, at level of service "E" during the PM peak hour, but the project impact is less than significant so that no project mitigation is required.

Intersections within Carlsbad would operate acceptably so project impacts would be less than significant and no project mitigation is required.

State Route 78 Mainlines

Project traffic impacts would be less than significant.

ES.4 BUILDOUT ALTERNATIVE 1

Street Segments Within Oceanside

Five segments are expected to be at level of service "F" during Buildout of Alternative 1, but only three would have a significant cumulative project impact.

- College Boulevard between Barnard Way and Vista Way, at level of service "F", but the project impact is less than significant.
- College Boulevard between Vista Way and Plaza Drive, at level of service "F", and the project impact is a significant cumulative impact. (Project Responsibility – 15.5%)
- College Boulevard between Plaza Drive and Marron Road, at level of service "F" as determined by a peak hour segment analysis, and the project impact is a significant cumulative impact. (Project Responsibility 32.8%)
- College Boulevard between Marron Road and the south City limit, at level of service "F", and the project impact is a significant cumulative impact.
 (Project Responsibility 6.4%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of these segments of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial and a four-lane Major Arterial to a six-lane Major Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification and widening infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the

subject impacted segments are located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way between College Boulevard and the SR-78 westbound ramps, at level of service "F", but the project impact is less than significant as indicated by the allowable increase in volume to capacity ratio and a peak hour segment analysis that shows a decrease in average travel speed of no more than one mile per hour. No project mitigation is required.

Street segments within Carlsbad are expected to operate acceptably during peak hours as required by the City's Growth Management Plan.

Intersections

Two intersections within Oceanside are expected to be at deficient levels of service, one has less than a significant project impact and the other has a significant cumulative impact.

- El Camino Real / Vista Way, at level of service "E" during the PM peak, but the project impact is less than significant with no project mitigation required.
- College Boulevard / Marron Road Lake Boulevard, at level of service "E" during the PM peak hour. The project will have a significant cumulative impact at this intersection, and should contribute a fair-share of the planned mitigation. (Project Responsibility – 13.3%)

Mitigation: The Oceanside Circulation Element Update Final EIR recommends adding a second northbound right-turn only lane on College Boulevard to eastbound Lake Boulevard.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted intersection is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

State Route 78 Mainlines

Project traffic impacts would be less than significant.

ES.5 BUILDOUT ALTERNATIVE 2

Street Segments Within Oceanside

Five segments are expected to be at level of service "F" during Buildout of Alternative 1, but only three would have a significant cumulative project impact.

- College Boulevard between Barnard Way and Vista Way, at level of service "F", but the project impact is less than significant.
- College Boulevard between Vista Way and Plaza Drive, at level of service "F", and the project impact is a significant cumulative impact. (Project Responsibility – 20.1%)
- College Boulevard between Plaza Drive and Marron Road, at level of service "F" as a result of a peak hour segment analysis, and the project impact is a significant cumulative impact. (Project Responsibility 28.6%)
- College Boulevard between Marron Road and the south City limit, at level of service "F", and the project impact is a significant cumulative impact.

 (Project Responsibility 7.3%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of these segments of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial and a four-lane Major Arterial to a six-lane Major Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification and widening infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segments are located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way between College Boulevard and the SR-78 westbound ramps, at level of service "F" with or without project traffic, and the project impact is significant cumulatively as indicated by the increase in volume to capacity of more than 0.02 at 0.04. (Project Responsibility – 30.8%)

<u>Mitigation Recommendation:</u> The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of

Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Intersections

Two intersections within Oceanside are expected to be at deficient levels of service, one has less than a significant project impact and the other has a significant cumulative impact.

- El Camino Real / Vista Way, at level of service "E" during the PM peak, but the project impact is less than significant with no project mitigation required.
- College Boulevard / Marron Road Lake Boulevard, at level of service "E" during the PM peak hour. The project will have a significant cumulative impact at this intersection, and should contribute a fair-share of the planned mitigation. (Project Responsibility 61.2%)

Mitigation: The Oceanside Circulation Element Update Final EIR recommends adding a second northbound right-turn only lane on College Boulevard to eastbound Lake Boulevard.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted intersection is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Intersections within Carlsbad are expected to operate acceptably during peak hours as required by the City's Growth Management Plan.

State Route 78 Mainlines

Project traffic impacts would be less than significant.

ES.6 MITIGATION SUMMARY

Table ES-1 lists for all alternatives evaluated segments and intersections that will have significant project impacts, and describes the recommended mitigation measures.

ES.7 CIRCULATION NETWORK ALTERNATIVES COMPARISON

Two buildout circulation network were evaluated, all using the same Quarry Creek land use plan.

Alternative 1 and 2 both included the Rancho Del Oro interchange at SR-78, while Alternative 2 deleted the extension of Marron Road through the designated Open Space area.

The preferred alternative for the Quarry Creek Investors, LLC is Alternative 2, which deletes the Marron Road extension through the Open Space area.

Page 1 of 6

TABLE ES-1

MITIGATION SUMMARY

ALTERNATIVE	SIGNIFICANT IMPACT WITH PROJECT	MITIGATION
Existing Plus Project	Segments: College Blvd. (Vista Way to Plaza Dr.) Impact: Direct	Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of this segment of Colleg Boulevard from a six-lane Major Arterial to a six-lane Prim Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification infeasible, so that the Oceanside Circulation Element Update Final EIR recommend Overriding Considerations. The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impactance considered significant and unmitigable. See CEQ. Guidelines Section 15091 (a) (2).
	Vista Way (College Blvd. to SR-78 WB Ramps) Impacts: Direct	The Oceanside Circulation Element Update recommend providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the Colleg Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted. The changes or alterations are within the responsibility are jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program accept payments in lieu of construction. Due to the fact the subject impacted segment is located outside the jurisdiction.
	Intersections; None	and regulatory authority of the City of Carlsbad, these impact are considered significant and unmitigable. See CEQ Guidelines Section 15091 (a) (2). Fair Share: 100% None

Page 2 of 6

TABLE ES-1

MITIGATION SUMMARY

ALTERNATIVE	SIGNIFICANT IMPACT WITH PROJECT	MITIGATION
Near-Term Plus Project	Segments: College Blvd. (Vista Way to Plaza Dr.) Impact: Direct	Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of this segment of Colleg Boulevard from a six-lane Major Arterial to a six-lane Prim Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification infeasible, so that the Oceanside Circulation Element Update Final EIR recommend Overriding Considerations.
		The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceansid does not appear to have adopted a program to construct suc improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impact are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2). Fair Share: 45.8%
	Vista Way (College Blvd. to SR-78 WB Ramps) Impacts: Direct	The Oceanside Circulation Element Update recommend providing a westbound dedicated right-turn lane an lengthening the westbound left-turn lanes at the Colleg Boulevard / Vista Way intersection by restriping the existin lanes. As stated in the Update, these improvements woul improve peak hour operations but would not fully mitigat segment impacts, so that Overriding Considerations should be adopted.
		The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceansid does not appear to have adopted a program to construct suc improvements and there does not appear to be a program to accept payments in lieu of construction. The City of Oceans does not appear to have adopted a program to construction improvements and there does not appear to be program to accept payments in lieu of construction. Due the fact that the subject impacted intersection is local outside the jurisdiction and regulatory authority of the City Carlsbad, these impacts are considered significant aummitigable. See CEQA Guidelines Section 15091 (a) (2)

To determine if the Marron Road deletion causes significant impacts, a comparison of intersection levels of service for the alternatives shows that only two intersections would be at unacceptable levels of service (LOS "E" or "F"), without mitigation, for Alternatives 1 and 2.

For Alternatives 1 and 2, both of these locations are at acceptable levels of service. Since alternative 2 includes the deletion of Marron Road, and all evaluated intersections would be at acceptable levels of service after planned mitigation consistent with the Oceanside General Plan Circulation Element Update, it can be concluded that the Alternative 2 deletion of Marron Road would have less than significant impacts.

To isolate the effect of deleting Marron Road with the Rancho Del Oro Road interchange, a comparison of intersection delay at the two intersections with acceptable levels of service after mitigation was conducted for Alternatives 1 and 2.

Table ES-2 below shows the results of this comparison.

Since both intersections are at an acceptable level of service after the same mitigation was applied to both alternatives, it can be stated that the deletion of Marron Road would have less than significant impacts to study area intersections.

TABLE ES-2
Alternative 1 and Alternative 2 Intersection Delay Comparison

	WITH MARRON RD.	WITHOUT MARRON RD.		
	Alternative 1	Alternative 2		
ECR / Vista Way (PM)	45.6 LOS D	47.8 LOS D		
College Blvd. / Marron Rd. – Lake Blvd.	55.0 LOS D	54.9 LOS D		
	EE CHARLETTAG BEHENDINGS	N. C. S. L. S. C. Garago, S.		

As shown, without Marron road, the increase in PM peak hour intersection delay at these two locations is within the allowable delay for an acceptable level of service "D", so that it can be concluded that the Alternative 2 deletion of Marron Road would have less than significant impacts to study area intersections.

1.0 INTRODUCTION

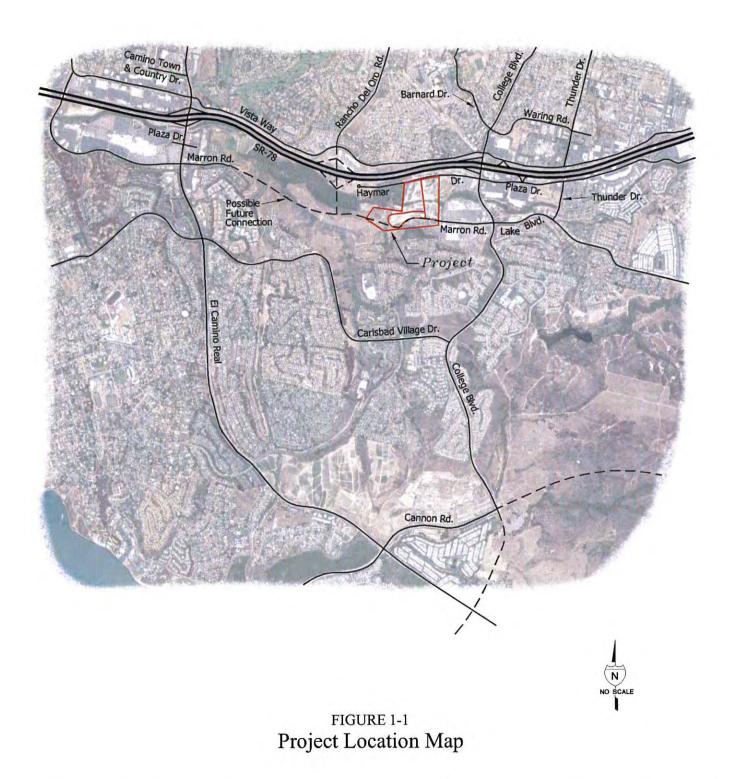

Urban Systems Associates, Inc. (USAI) has been retained by Quarry Creek Investors, LLC to evaluate potential traffic impacts due to development of the 656 dwelling unit Quarry Creek Master Plan. The Quarry Creek Master Plan also includes 1.5 net acres of community facilities, and a 0.9 acre park and ride lot.

The project is located in northern Carlsbad and will have access from Marron Road, which currently extends through the Quarry Creek Shopping Center from College Boulevard in the City of Oceanside, and from Haymar Drive which extends to the west from College Boulevard. **Figure 1-1** shows the project location.

This traffic analysis was conducted for Existing Conditions, Project Plus Existing Conditions, Near-Term and Near-Term Plus Project Conditions, Buildout and Buildout Plus Project Conditions.

The Existing Conditions, Project Plus Existing Conditions, Near-Term and Near-Term Plus Project Conditions evaluations were conducted assuming the current existing street network without the future extensions of Marron Road to the west to connect with El Camino Real, and without the State Route (SR) 78 / Rancho Del Oro Road interchange, and the Rancho Del Oro Road extension to Marron Road.

The Buildout and Buildout Plus Project Conditions were evaluated for two street network alternatives:

<u>Alternative 1</u> – This street network assumes all roadways that are included in the City of Carlsbad and City of Oceanside General Plan Circulation Plans. This street network assumes the extension of Marron Road from the existing east end at the Quarry Creek Shopping Center property line, to the existing west end approximately 1,000 feet east of El Camino Real, and through a designated open spare area, all within the City of Carlsbad.

<u>Alternative 2</u> – This street network assumes the Rancho Del Oro Road interchange at SR-78 is constructed, but the Marron Road extension through the designated open space area is not included, nor is the Rancho Del Oro Road extension to Marron Road.

The project preferred alternative is Alternative 2 which does not assume the Marron Road extension through the open space area.

These alternatives and the scope of this study were coordinated for agreement from both Oceanside and Carlsbad engineering departments.

The Quarry Creek site is identified by SANDAG as a Smart Growth Community Center on the Smart Growth Concept Map for the San Diego Region. The project site is located in close proximity to other uses, including retail, employment and educational uses. In addition, the site is served by transit and the project proposes a new park and ride lot on the north side of Haymar Drive within the project boundary. The mixed use environment of the area, the availability of transit services and park and ride facilities and the walkable nature of the planned development will reduce traffic generation from the site by promoting

alternative forms of transportation (walking, biking and transit) and by facilitating multiple destinations in a single vehicle trip. While it is realistic to expect some reductions in trips, the analysis in this report does not include any mixed use credits and therefore represents a worst-case scenario in terms of vehicular trip generation from the proposed project.

2.0 ANALYSIS METHODOLOGY

The <u>San Diego Traffic Engineers' Council (SANTEC)</u> / <u>Institution of Transportation Engineers (ITE – California Border Station) Guidelines for Traffic Impact Studies in the San Diego Region</u> was used as a guide in the preparation of this traffic study.

The Final Program Environmental Impacts Report for the City of Oceanside Circulation Element Update (April 2012) was also reviewed for determining intersection and street segment analysis for those locations within the project study area that are within the City of Oceanside.

The City of Carlsbad Growth Management Plan Circulation Performance Standards were used for evaluating intersections and street segments within the City of Carlsbad.

The <u>Caltrans Guide for the Preparation of Traffic Impact Studies</u>, December 2002, was consulted for determining the evaluation criteria for State Route 78.

2.1 SEGMENT ANALYSIS

Much of the study area roadway segments are in the City of Oceanside, so that City of Oceanside criteria were used for the analysis of those segments. **Table 2-1** shows the Roadway Classification, Level of Service, and Capacity table from the Final Program Environmental Impact Report for the Oceanside Circulation Element Update, Appendix E which includes the City of Oceanside Master Transportation Plan. Also, as stated in that Circulation Element Update, segment level of service (LOS) "D" is to be considered acceptable in Oceanside, which is consistent with regional and City of Carlsbad acceptable levels of service for roadway segments.

TABLE 2-1

Circulation Element Roadway Classification LOS & Capacity (Use for City of Oceanside Only)

		Cross Section (1)	Level of Service				
Class	Lanes		A	В	C	D	E
Expressway	6	102/160, 122/200	30,000	42,000	60,000	70,000	80,000
Expressway	4	102/160, 122/200	25,000	35,000	50,000	55,000	60,000
Prime Arterial	6	104/124	25,000	35,000	50,000	55,000	60,000
6-Lane Major Arterial	6	104/124	20,000	28,000	40,000	45,000	50,000
5-Lane Major Arterial (2)	5	102/122	17,500	24,500	35,000	40,000	45,000
4-Lane Major Arterial	4	80/100	15,000	21,000	30,000	35,000	40,000
Secondary Collector (4 lanes with 2-way left turn lane)	4	64/84	10,000	14,000	20,000	25,000	30,000
Secondary Collector (4 lanes without 2-way left-turn lane, with left turn pockets)	4	54/74, 60/80	9,000	13,000	18,000	22,000	25,000
Collector (commercial fronting, 2-lanes with 2-way left turn lane) (3)	2	50/70	5,000	7,000	10,000	13,000	15,000
Collector (residential streets in the Circulation Element or industrial fronting)	2	40/60, 50/70	4,000	5,500	7,500	9,000	10,000
Local Street (residential streets NOT in the Circulation Element)	2	36/56, 40/60	2	4-4-	2,200		

Note:

- 1. Cross sections are listed as curb-to-curb width / total right-of-way width, in feet.
- 2. Vandergrift Boulevard is the only roadway designated as a 5-Lane Major Arterial. It is not intended that other roadways be built to 5-Lane Major Arterial standards.
- 3. This capacity will also be assumed for two-lane one-way collectors.

Source:

Traffic Impact Analysis Report Oceanside Master Transportation Plan Final, April 2012, Table 3-1.

Within Carlsbad, the Growth Management Plan Circulation Performance Standard is used for roadway segment level of service determination. That standard requires a peak hour level of service "D" to be considered acceptable. Following that methodology, the levels of service for street segments between intersections were determined using a 1,800 vehicles per hour capacity per lane and volume to capacity ratio corresponding to levels of service.

2.2 INTERSECTION ANALYSIS

For the determination of direct project impacts at intersections within Carlsbad, as required by the City of Carlsbad Growth Management Plan Circulation Performance Standard, the Intersection Capacity Utilization method of signalized intersection evaluations was used for Existing and Project Plus Existing Conditions.

For Near-Term and Buildout conditions, and for all conditions within Oceanside, the intersection evaluation follows the procedures obtained in the Highway Capacity Manual (HCM) 2000, chapter 16.

The Highway Capacity Manual computer software program was used for these intersection analyses and to estimate average seconds of traffic control delay per vehicle and to relate the delay to levels of service.

Table 2-2 shows the level of service relation to delay used for this analysis.

2.3 SIGNIFICANCE THRESHOLDS

In order to determine if the project would have a significant traffic impact on roadway segments or intersections, both the SANTEC / ITE Guidelines and the City of Carlsbad Growth Management Plan Circulation Performance Standard were used.

TABLE 2-2

HCM Level of Service Description for Signalized Intersections

Level of Service Description of Traffic Conditions		Control Delay (sec/veh)	
A	Insignficant delays: no approach phase is fully utilized and no vehicle waits longer than one red indication		
В	Minimal delays: an occasional approach phase is fully utilized. Drivers begin to feel restricted.	>10-20	
C	Acceptable delays: major approach phase may become fully utilized. Most drivers feel somewhat restricted.	>20-35	
D	Tolerable delays: drivers may wait through more than one red indication. Queues may develop but dissipate rapidly, without excessive delays.	>35-55	
Ē	Significant delays: volumes approaching capacity. Vehicles may wait through several cycles and long vehicle queues form upstream.	>55-80	
F	Excessive delays: represents conditons at capacity, with extremely long delays. Queues may block upstream intersections.		

Source: Highway Capacity Manual, Transportation Research Board, 2000

- 1. If the addition of project traffic to a roadway segment or intersection causes the level of service to decrease from "D" to "E" or "F", then the project is considered to have a significant impact.
- 2. If a facility is at level of service "E" or "F" before the addition of project traffic, then the following changes are allowed:
 - Roadway Segments An increase in the volume to capacity (v/c) ratio based on average daily
 traffic volumes, of no more than 0.02 is acceptable. However, a segment peak hour analysis must
 be completed under project conditions to determine peak hour significance of project impacts.
 - Intersections An increase in delay of no more than 2.0 seconds is acceptable.
 - <u>Freeways</u> An increase in volume to capacity (V/C) ratio of no more than 0.01 is acceptable.

2.4 STATE ROUTE 78 MAINLINE SEGMENTS

As described in the Caltrans Guidelines a peak hour analysis for both AM and PM peak hours is provided. Average daily traffic volumes on SR-78 were converted to peak hour flows by using a Design Hour Factor (K), and the Directional Factor (D), as published in Caltrans' traffic volume summaries for SR-78. The peak hour volumes are compared to the capacity of the freeway segment and the resulting volume to capacity ratio relates to a level of service for multi-lane highways. **Table 2-3** shows the level of service based on volume to capacity ratios typically used by Caltrans and also provided in the HCM.

TABLE 2-3
SR-78 Freeway Segment Level of Service Definitions

Caltrans District 11			
reeway Level of Service Definit	ions		
LOS	V/C	Congestion / Delay	Traffic Description
Jsed for freeways, expressways,	and conventional highways		
A	0-00.41	None	Free Flow
В	0.42-0.62	None	Free to stable flow, light to moderate volumes.
С	0.63-0.80	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted.
D	0.81-0.92	Minimal to substantial	Approaches unstable flow, heavy volumes, very limited freedom to maneuver.
Е	0.93-1.00	Significant	Extremly unstable, slow, manueverability and psychological comfort extremely poor.
Jsed for freeways and expresswa	ays		
F0	1.01-1.25	Considerable (0-1 hour delay)	Forced flow, heavy congestion, long queues form behind breakdown points, stop and go.
F1	1.26-1.35	Severe (1-2 hour delay)	Very heavy congestion, very long queues.
F2	1.36-1-45	Very severe (2-3 hour delay)	Extremely heavy congestion, longer queues, more numerous breakdown points, longer stop periods.
F3	>1.46	Extremely severe (3+hours of delay)	Gridlock.

Source: Caltrans, 1992

3.0 EXISTING CONDITIONS

The SANTEC / ITE Guidelines for the Preparation of Traffic Impact Studies in the San Diego Region recommends the scope of a traffic study to include local roadway segments and intersections that are expected to have fifty or more project peak hour trips added in either direction to the existing roadway traffic. As shown in the project description section of this report (Section 4.0), the study area has been determined by reviewing select zone assignments from the SANDAG computer traffic forecasts that predict the directional distribution of project traffic. In addition other locations of interest were evaluated to compare the effects of the different roadway alternatives.

3.1 STREET SEGMENTS

The following describes roadways expected to be impacted by fifty or more project peak hour vehicle trips and other key roadways, and are shown in **Figure 3-1** along with current functional roadway classifications.

College Boulevard: This roadway is a major arterial of varying width and lanes extending from north of State Route 78 in the City of Oceanside to south of the Oceanside City limit into Carlsbad. Within Carlsbad this roadway is constructed with four lanes from the City limit to Cannon Road. Cannon Road extends to the west from College Boulevard providing access to Central Carlsbad and Interstate 5. The segment of College Boulevard connecting to El Camino Real has not yet been constructed, but is expected to be completed before the Quarry Creek Master Plan adds traffic to this location.

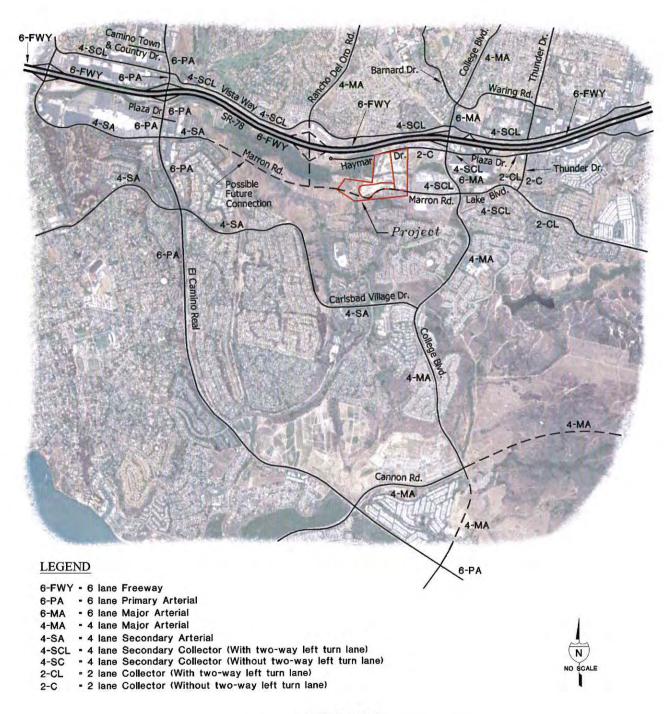

FIGURE 3-1
Existing Roadway Classifications

Marron Road: This roadway is a four lane secondary arterial (with left turn lane) within Oceanside extending west from College Boulevard through the Quarry Creek Shopping Center to the City boundary. Within Carlsbad, this future roadway is classified as a four lane secondary arterial and would extend to El Camino Real through an open space area if constructed.

A short segment is constructed east of El Camino Real and serves the adjacent shopping centers and residential neighborhoods. Marron Road extends west of El Camino Real adjacent to the Plaza Camino Real Shopping Center.

<u>Lake Boulevard</u>: This street is a Secondary Collector that provides access to residential neighborhoods east of College Boulevard in Oceanside. It is a four-lane roadway with a continuous left turn lane from College Boulevard to Thunder Drive, and reduces to two lanes east of Thunder Drive.

<u>Plaza Drive</u>: This street is a Secondary Collector, divided, with four lanes from College Boulevard to the SR-78 eastbound off-and-on ramps, in Oceanside. The roadway narrows to two lanes between the SR-78 ramp intersection and Thunder Drive.

<u>Haymar Drive</u>: This cul-de-sac street extends to the west from College Boulevard as a two-lane Collector with a left turn lane at the College Boulevard intersection. The western portion is unimproved and provides access into and out of the existing quarry at this location, and will be improved as a two lane local street within Carlsbad, providing access to the Quarry Creek project.

<u>Vista Way:</u> This roadway is a Secondary Collector and provides access to residential neighborhoods and retail / commercial centers. It is a four-lane roadway with a continuous two-way left turn lane between Jefferson Street and the east City limits of Oceanside.

El Camino Real: This roadway is a six-lane Prime Arterial within the study area in Oceanside extending from north of SR-78 to the southern City limit. Within Carlsbad this is also a six-lane Prime Arterial within the study area, but varies in width south of Chestnut Drive.

Existing twenty-four hour roadway segment volumes were obtained from a traffic count subcontractor, and are shown in **Figure 3-2**.

Table 3-1 shows roadway segment existing levels of service for those segments within Oceanside using the capacity and level of service standards shown in **Table 2-1**. Only two study area Oceanside segments currently operate deficiently, Vista Way between College Boulevard and the SR-78 westbound ramps, and Lake Boulevard between Thunder Drive and Sundown Lane, both at LOS "E".

On Vista Way, the Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted. The dedicated westbound right-turn-only lane is a future unfunded project, while the restriping is a condition of approval for the Tri-City Medical Office project.

On Lake Boulevard the Oceanside Circulation Element Update Final EIR recommends retaining this segment as two lanes and adopting Overriding Considerations, due to an agreement between the City and the residents to maintain this as a two lane road with a two-way left turn lane pocket.

The roadway segments within Carlsbad have been evaluated during AM and PM peak hours, as required by the City's Growth Management Plan. The peak hour segment volumes are tabulated in **Table 3-2**. No Carlsbad roadway segments evaluated operate deficiently, as shown in this table.

D = Direction

(1) = Based on 1,800 vehicles per lane per hour.

V/C = Volume divided by capacity

Source: Highest Approach Volumes at Intersections.

3.2 INTERSECTIONS

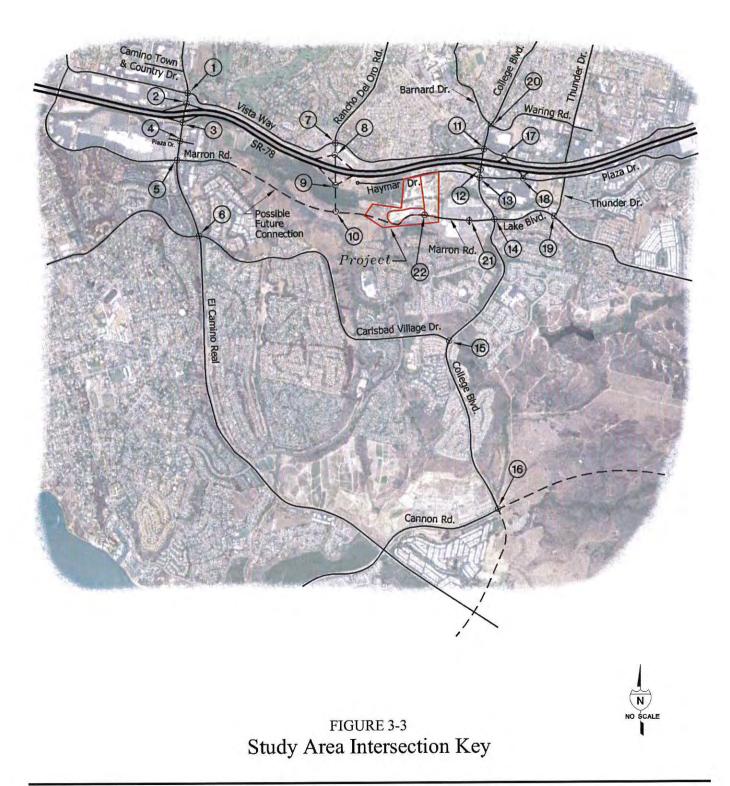

Traffic volumes for study area intersections were obtained for AM and PM peak hours. The locations are shown in **Figure 3-3**, and lane configurations are shown in **Figure 3-4**. The turning movement traffic volumes are shown in **Figure 3-5**.

The City of Carlsbad requires existing intersection levels of service to be evaluated using the Intersection Capacity Utilization method, while intersections within Oceanside were evaluated using HCM software. Therefore, two intersection level of service methods have been combined in the following table.

Table 3-3 shows intersection levels of service for portions of the study area within Oceanside using intersection delay (Delay) in seconds, while the Carlsbad intersections are evaluated using a percentage of intersection capacity (ICU), as footnoted.

As shown in this table, there are currently no deficiently operating intersections within the study area. Deficient operations occur at level of service "E" or "F", while the evaluated intersections are at an acceptable "D" or better.

Appendix A includes intersection traffic count summaries and levels of service worksheets.

3.3 STATE ROUTE 78 MAINLINES

Table 3-4 shows existing State Route 78 freeway mainline segment levels of service.

As shown in this table, during peak hours segments of SR-78 operate at level of service "E".

The Regional Congestion Management Program (CMP) has established the level of service standard for SR-78 between Interstate 5 and Rancho Santa Fe Road at LOS "F", so the existing conditions do not exceed the CMP Freeway System Level of Service Standard.

TABLE 3-4 Existing Freeway Segment Levels of Service

4.0 PROJECT DESCRIPTION

The Quarry Creek Master Plan consists of 656 dwelling units, including a mix of detached units, attached units, and apartments. The Master Plan also includes 1.5 net acres for community facilities that might include a day-care, and 0.9 acres for a park-and-ride lot. **Figure 4-1** shows the Quarry Creek Master Plan Site Plan.

Table 4-1 includes the vehicle trip generation for the Quarry Creek Master Plan. As shown in this table, the project is expected to generate 5,578 average daily vehicle trips, 469 AM peak hour trips (121 inbound; 348 outbound), and 572 PM peak hour trips (386 inbound: 186 outbound). External trips have been adjusted down slightly to account for a transit reduction for planning area R-1, R-2, and R-3, which will be within one-fourth mile of transit service. The transit reduction decreases average daily vehicle trips by 2.8% and AM / PM peak hour trips by 2.6%.

Marron Road will extend into the site from the east, and Haymar Drive will also be extended into the site from the east.

Two roadway network alternatives are evaluated in this report.

Alternative 1 – This street network assumes all roadways that are included in the City of Carlsbad and City of Oceanside General Plan Circulation Plans, including the Rancho Del Oro Road interchnage. This street network assumes the extension of Marron Road from the existing east end at the Quarry Creek Shopping Center property line, to the existing west end approximately 1,000 feet east of El Camino Real, all within the City of Carlsbad, and through a designated open space area.

<u>Alternative 2</u> – This street network assumes the Rancho Del Oro Road interchange at SR-78 is constructed, but the Marron Road extension is not included, nor is the Rancho Del Oro Road extension to Marron Road.

The SANDAG Series 11 Combined North County Model was used to determine Buildout average daily traffic volumes for each street network and are included in the following evaluation of project traffic impacts.

The Quarry Creek site is identified by SANDAG as a Smart Growth Community Center on the Smart Growth Concept Map for the San Diego Region. The project site is located in close proximity to other uses, including retail, employment and educational uses. In addition, the site is served by transit and the project proposes a park and ride lot on the north side of Haymar Drive just west of College Boulevard. The mixed use environment of the area, the availability of transit services and park and ride facilities and the walkable nature of the planned development will reduce traffic generation from the site by promoting alternative forms of transportation (walking, biking and transit) and by facilitating multiple destinations in a single vehicle trip. While it is realistic to expect some reductions in trips, the analysis in this report does not include any mixed use credits and therefore represents a worst-case scenario in terms of vehicular trip generation from the proposed project.

5.0 EXISTING PLUS PROJECT CONDITONS

5.1 PROJECT ONLY TRAFFIC VOLUMES

The Combined North County traffic model forecast for Alternative 4 was used to determine the project only vehicle trip directional distribution percentages, and are shown in **Figure 5-1**.

The project only average daily traffic volumes are shown in Figure 5-2.

The project only AM and PM peak hour traffic volumes at study area intersections are shown in **Figure 5**-3.

5.2 STREET SEGMENTS WITHIN OCEANSIDE

Project only average daily traffic volumes were added to existing traffic volumes and are shown in **Figure** 5-4.

The roadway segments within Oceanside with project traffic added to existing volumes are shown in Table 5-1.

Three segments in this table have possible project significant impacts:

• College Boulevard, between Vista Way and Plaza Drive, decreases from level of service "D" to "E", and the change in volume to capacity ratio is greater than 0.02. Therefore the project has a significant direct impact to this segment.

NOTES:

- 1. Capacity of roadway at LOS E per City of Oceanside Master Transportation Plan, April 2012, Table 3-1.
- 2. V/C = Volume to capacity at LOS E ratio; Δ V/C = Change in V/C.
- 3. LOS = Level of service.
- 4. Δ V/C = Change in V/C: A significant impact occurs at LOS "E" or "F" and the change in V/C ratio is greater than 0.02.
- *Not Significant since the change in V/C ratio is no more than 0.02.

Since physical improvements to add lanes are infeasible, the April 2012 Final EIR for the City of Oceanside Circulation Element Update recommends reclassification of this segment from a six-lane Major Arterial to a six-lane Prime Arterial. This reclassification would mitigate the project significant impact. However, Oceanside considers roadway reclassification infeasible, so that the Oceanside Update ultimately recommends the adoption of Overriding Conditions.

The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Vista Way, between College Boulevard and the SR-78 westbound ramps. This segment is at level of service "E" under existing conditions and with project traffic added. The project change in volume to capacity ratio is greater than 0.02, at 0.041, so this would be a significant impact.

The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Lake Boulevard, between Thunder Drive and Sundown Lane, decreases from level of service "E" to "F". However, the change in volume to capacity ratio is less than 0.02 so that this is not considered a significant impact to this segment. No project mitigation is required.

No other segments evaluated within the City of Oceanside would be significantly impacted by project traffic for the Project Plus Existing condition.

5.3 STREET SEGMENTS WITHIN CARLSBAD

Project only AM and PM peak hour traffic volumes were added to existing peak hour traffic volumes between study area intersections in Carlsbad and the results are displayed in **Table 5-2**.

As shown in this table, all street segments within Carlsbad would operate acceptably with project traffic added to existing peak hour volumes on roadway segments between intersections.

V/C=Volume divided by capacity

Source: Highest Approach Volumes at Intersections.

5.4 INTERSECTIONS

Project peak hour traffic volumes were added to existing turning movement volumes at study area intersections and peak hour levels of service were calculated.

Table 5-3 shows the results of the intersection level of service evaluation. Also shown in this table are existing levels of service and delay for comparison. The Carlsbad intersections were evaluated using the ICU method so that intersection capacity utilization percentages are shown for those locations.

A significant impact would occur at the Carlsbad locations if the level of service decreases to "E" or "F". Within Oceanside, a significant impact would occur if the intersection is at level of service "E" or "F", and the increase in delay resulting from the project is more than 2.0 seconds.

As shown in this table, the intersections within Carlsbad maintain an acceptable level of service (i.e. LOS D or better) and therefore there are no significant project impacts at those locations and no project mitigation is needed.

Also shown, the intersections within Oceanside are expected to operate acceptably with project peak hour traffic added to existing peak hour volumes, and therefore there are no significant project impacts at those locations in Oceanside and no project mitigation is needed.

Appendix B includes Project Plus Existing intersection levels of service worksheets.

5.5 STATE ROUTE 78 MAINLINES

The project traffic volumes added to existing SR-78 average daily traffic volumes are included in **Table 5-4.** This table shows existing and project plus existing freeway volumes. This table also compares levels of service and volume to capacity (V/C) ratios, and indicates if the project has or has not a significant freeway impact. At levels of service "E" or "F" an increase in V/C ratio of no more than 0.01 is acceptable. As shown in this table, segments at level of service "E" have V/C increases of less than 0.01 so that the project has less than significant impacts to SR-78 mainlines.

- S? = Significant Impact: Yes (Y), No (N).
- (At LOS E or F, an increase in V/C of no more than 0.01 is acceptable).

6.0 NEAR TERM WITHOUT PROJECT

The cumulative condition impacts from other approved and reasonably feasible pending projects that are expected to influence the study area are evaluated in this section.

Other projects in Oceanside and Carlsbad considered to be adding traffic before or at approximately the same time as the Quarry Creek Master Plan are listed below:

- Within the City of Oceanside:
- El Corazon Specific Plan (Phase 1A, 1D, 1E, and 1F; 7,960 ADT).
- Tri-City Medical Office building (60,000 S.F.; 3,000 ADT).
- Within the City of Carlsbad:
- Plaza Camino Real Westfield Shopping Center Revitalization Project (5,186 ADT from vacant leasable space; 1,240 ADT from new space).
- Carlsbad High School (Phase I; 1,500 students; 1,950 ADT).
- Robertson Ranch (1,162 D.U.; 10.0 AC.Commercial; 13 AC. Park; 66.0 KSF Office; 17,800 ADT).
- Holly Springs Catarini (239 D.U.; 2,250 ADT)
- Dos Colinas (309 retirement D.U.; 29 D.U. affordable housing; 1,340 ADT).
- Palomar Airport Road Commons (16.6 acre Community Shopping Center; 12,370 ADT).
- La Costa Town Square (284,000 S.F. Community Shopping Center; 198 D.U.; 55,000 S.F. Office; 25,516 ADT).

<u>Appendix B</u> includes excerpts from other projects traffic reports showing each project trip generation and directional distribution of peak hour and daily traffic volumes.

Figure 6-1 shows the location of the other projects.

6.1 STREET SEGMENTS WITHIN OCEANSIDE

Figure 6-2 includes average daily traffic volumes to be added to the street network as a result of other projects.

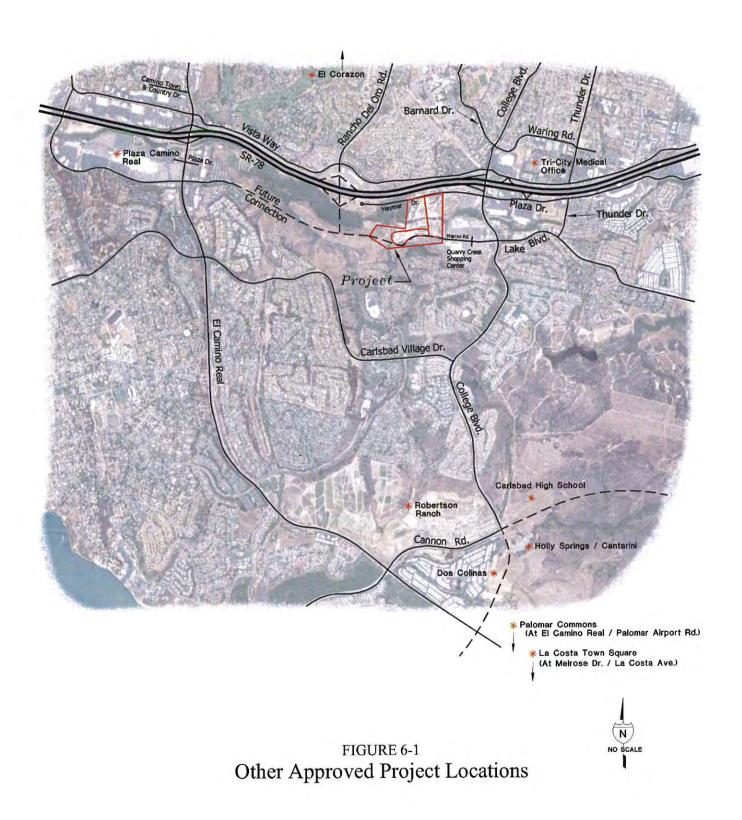

Figure 6-3 shows existing plus other project's average daily traffic volumes.

Table 6-1 includes roadway segments within Oceanside with cumulative projects added. This table indicates that all segments evaluated within Oceanside would operate acceptably with cumulative projects added, except at the following segments:

- El Camino Real between Vista Way and SR-78 Westbound Ramps, at level of service "E".
- College Boulevard between Vista Way and Plaza Drive, at level of service "E";
- Vista Way between College Boulevard and the SR-78 Westbound Ramps, at level of service "F";
- Lake Boulevard between Thunder Drive and Sundown Lane, at level of service "F".

6.2 STREET SEGMENTS WITHIN CARLSBAD

Cumulative other project's AM and PM peak hour volumes at existing intersections are shown in **Figure** 6-4. These volumes were added to street segments within Carlsbad and street segment levels of service were calculated, as shown in **Table 6-2.** As indicated, all Carlsbad segments evaluated would operate acceptably with cumulative project's traffic added.

6.3 INTERSECTIONS

For this traffic condition the Highway Capacity Manual method of estimating intersection control delay and corresponding levels of service were used for intersections within Oceanside and Carlsbad.

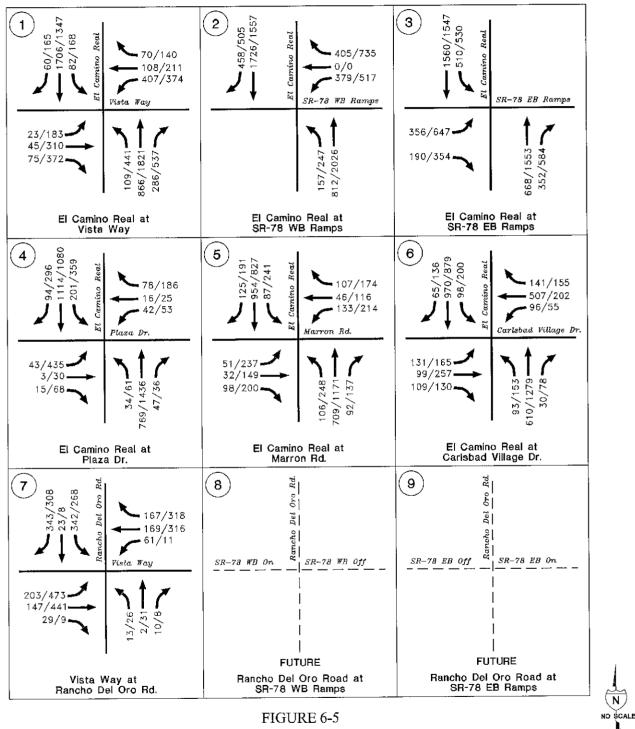

Figure 6-5 shows AM and PM peak hour volumes at study area intersections with the cumulative projects' traffic added to existing volumes.

Figure 6-6 includes intersection lane configurations for Near-Term conditions.

There are five intersections within the City of Oceanside that have planned but mostly unfunded improvements for Near-Term conditions as a result of previous traffic studies. The City of Oceanside has requested these improvements be assumed for Near-Term and Buildout conditions:

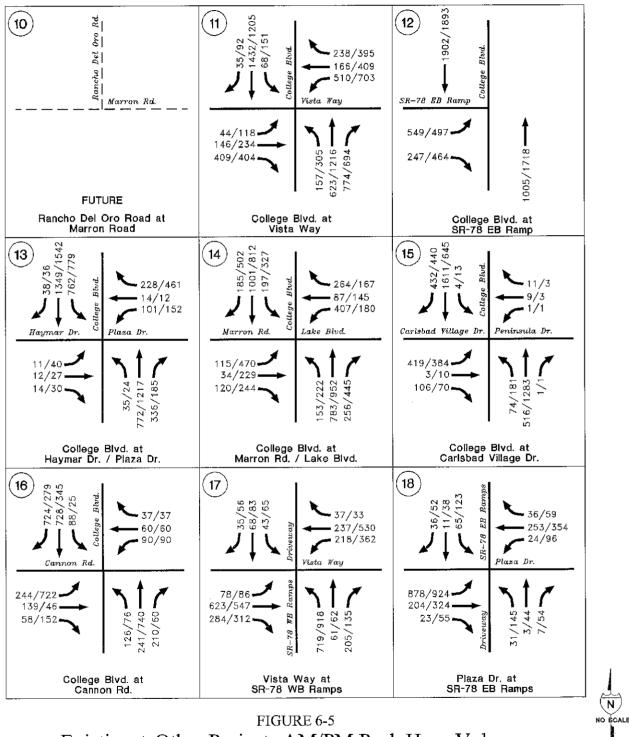

- Intersection #1, El Camino Real / Vista Way: On El Camino Real, add a northbound to eastbound right-turn-only lane;
- Intersection #11, College Boulevard / Vista Way: On College Boulevard add a second northbound
 to eastbound right-turn-only lane (a condition of approval for the Tri-City Medical Office); on
 Vista Way add a westbound to northbound right-turn-only lane;
- Intersection #13, College Boulevard / Haymar Drive Plaza Drive: on College Boulevard, add a northbound to eastbound right-turn-only lane;
- Intersection #14, College Boulevard / Marron Road Lake Boulevard: on College Boulevard, add
 a second northbound to eastbound right-turn-only lane;

Page 1 of 3

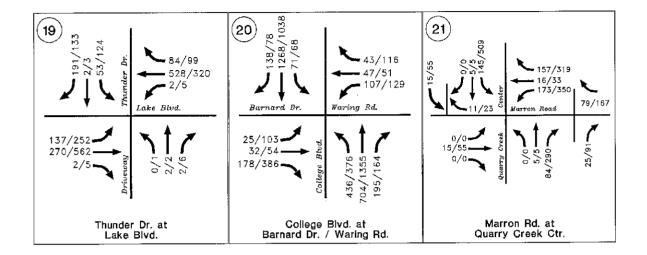

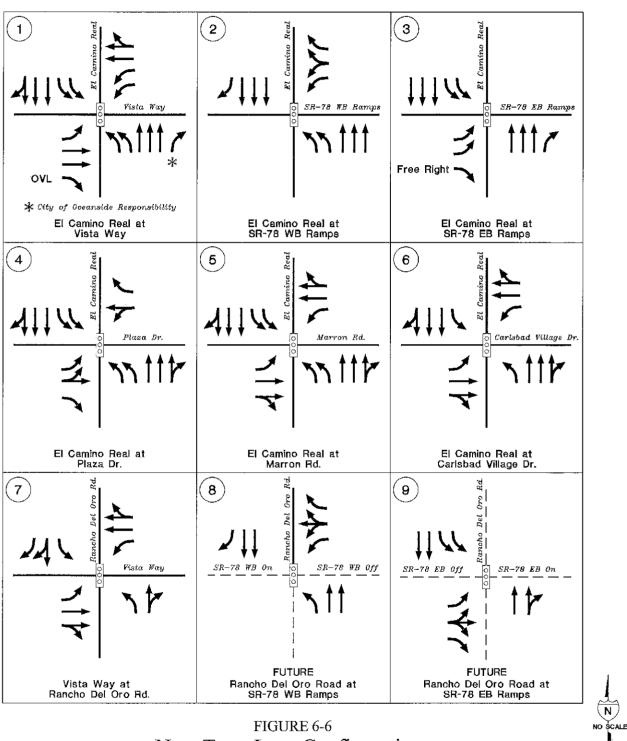

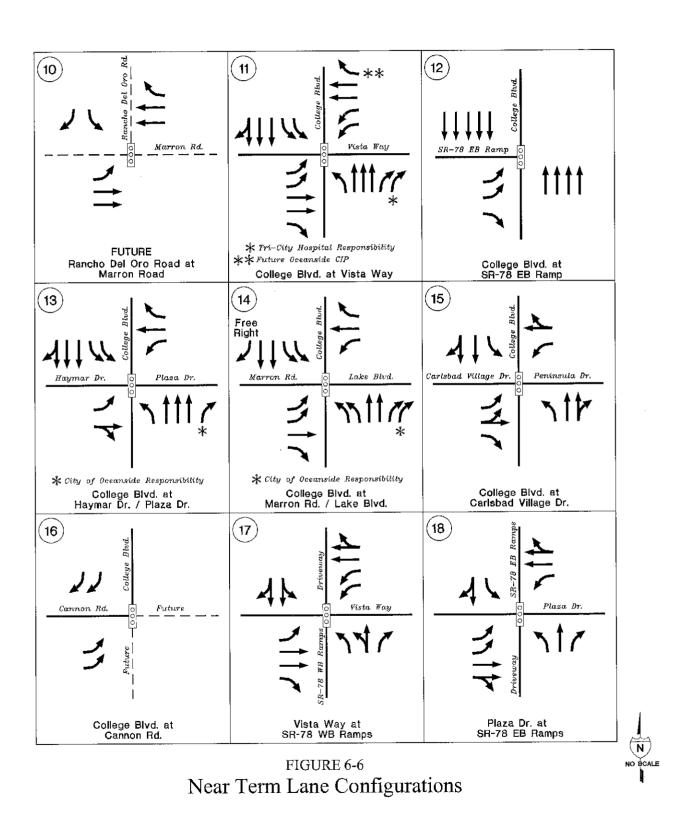

FIGURE 6-5
Existing + Other Projects AM/PM Peak Hour Volumes

Page 1 of 3

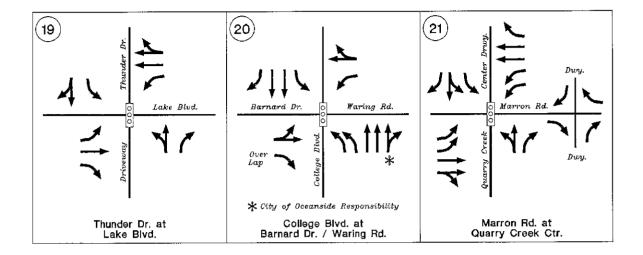

Near Term Lane Configurations

Page 2 of 3

001307-Report_H.doc

Page 3 of 3

Intersection #20, College Boulevard / Barnard Drive — Waring Road: on College Boulevard in the northbound direction, convert the dedicated right-turn-only lane to a third northbound shared-through / right turn lane. Widen the far side of the intersection to accept the third northbound shared through-right turn lane.

Table 6-3 includes intersection levels of service for the Near-Term Without Project conditions, but without the planned improvements. As indicated in this table all evaluated intersections would operate acceptably under this condition, with existing lane configurations, except at the El Camino Real / Vista Way intersection at level of service "E" during the PM peak hour.

Table 6-3-A shows five intersections that have planned improvements by the City of Oceanside. With mitigation, adding a northbound right turn only lane on El Camino Real to eastbound Vista Way, would mitigate the level of service in the PM peak hour to "D".

Appendix C includes intersection levels of service worksheets for Near-Term conditions.

6.4 STATE ROUTE 78 MAINLINES

The other pending project's traffic volumes were added to existing SR-78 freeway volumes and the mainline peak hour level of service are included in **Table 6-4**.

- (3) Caltrans District 11 LOS Estimation Procedures, See Table 2-3

7.0 NEAR TERM PLUS PROJECT

The Quarry Creek Master Plan project only average daily traffic volumes were added to street segments and intersections evaluated under the Near-Term Without Project condition and levels of service were calculated.

Figure 7-1 shows average daily traffic volumes for the Near-Term Plus Project conditions.

Figure 7-2 includes project only AM and PM peak hour volumes added to the Near-Term Without Project conditions.

Figure 7-3 shows Near-Term Plus Project intersection lane configurations.

The roadway system for this Near-Term evaluation assumes no Marron Road extension since the extension would be a long term project, currently unfunded.

7.1 STREET SEGMENTS WITHIN OCEANSIDE

Table 7-1 includes roadway segments within Oceanside with project traffic added to Near-Term conditions. This table indicates that all segments evaluated within Oceanside would operate acceptably with project traffic added except at four locations.

Lake Boulevard	Thunder Drive to Sundown Lane	EB	25.5	25.4	В	В	22.6	22.6	C	C	
		WB	28.8	28.8	В	В	27.5	27.5	В	В	

Notes.

At LOS "E" or "F", if the segment travel speed decreases by more than one MPH due to the addition of project traffic, the project will have a significant impact.

Note: No segment at LOS "E" or "F" decreases in travel speed by more than one mph for the Near-Term Plus Project Condition.

^{*}Shading inidcates a significant impact.

- El Camino Real between Vista Way and SR-78 Westbound Ramps, at level of service "E". The project change in volume to capacity ratio is no more than 0.02 (at 0.002) so that the project impact would be less than significant and, therefore, no project mitigation would be needed.
- College Boulevard, between Vista Way and Plaza Drive, is at level of service "F", and the change in volume to capacity ratio is greater than 0.02. Therefore the project has a significant direct impact to this segment.

Mitigation Recommendations: Since physical improvements to add lanes are infeasible, the April 2012 Final EIR for the City of Oceanside Circulation Element Update recommends reclassification of this segment from a six-lane Major Arterial to a six-lane Prime Arterial. This reclassification would mitigate the project significant impact. However, the Oceanside Update considers roadway reclassification as infeasible, so that the Oceanside Update recommends the adoption of Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Vista Way between College Boulevard and the SR-78 Westbound Ramps, at level of service "E".
 The project change in volume to capacity ratio is greater than 0.02 so this would be a significant project impact.

The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted. The dedicated westbound right-turn-only lane is a future unfunded Oceanside project, while the restriping is a condition of approval for the Tri-City Medical Office project.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Lake Boulevard, between Thunder Drive and Sundown Lane, decreases from level of service "E" to "F". However, the change in volume to capacity ratio is less than 0.02 (at 0.013) so that this is not considered a significant impact to this segment, and no project mitigation is required.

No other segments evaluated within the City of Oceanside would be significantly impacted by project traffic for the Near-Term Plus Project condition.

7.2 STREET SEGMENTS WITHIN CARLSBAD

Project only AM and PM peak hour traffic volumes were added to Near-Term Without Project conditions on roadway segments between intersections, and are displayed in **Table 7-2**.

As shown in this table, all street segments within the Carlsbad study area would operate acceptably with project traffic added for the Near-Term Plus Project condition. The project would have less than significant impacts to these segments.

7.3 INTERSECTIONS

Project only peak hour traffic volumes were added to Near-Term Without Project turning movement volumes at study area intersections, and peak hour levels of service were calculated using the Highway Capacity Manual method for intersections within Oceanside and Carlsbad.

D = Direction

(1) = Based on 1,800 vehicles per lane per hour.

V/C=Volume divided by capacity

Source: Highest Approach Volumes at Intersections.

V/C	LOS
0.00-0.60	A
0.61-0.70	В
0.71-0.80	С
0.81-0.90	D
0.91-1.00	E
Over 1.00	F

Table 7-3 shows the results of the intersection level of service evaluation for the Near-Term Plus Project condition. Also shown in this table are levels of service without the project for comparison.

Within both Oceanside and Carlsbad, a significant impact would occur if the intersection is at level of service "E" or "F", and the increase in delay resulting from the project is more than 2.0 seconds.

As shown in this table, all evaluated intersections except one maintain an acceptable level of service (i.e., LOS D or better), and, therefore, project impacts are less than significant and no project mitigation would be needed at these locations.

All intersections were evaluated with existing lane configurations.

The El Camino Real / Vista Way intersection would operate at level of service "E" without or with project traffic added. The change in delay resulting from the project is less than 2.0 seconds so the project impact is less than significant, and no project mitigation is required.

<u>Table 7-3-A</u> includes five intersections within Oceanside that have planned improvements for Near-Term and Buildout conditions. The El Camino Real / Vista Way intersection would operate acceptably with the planned but unfunded Oceanside improvement of adding a northbound right-turn-only lane on El Camino Real.

Appendix D includes Near-Term Plus Project intersection levels of service worksheets.

7.4 STATE ROUTE 78 MAINLINES

The project traffic volumes were added to Near-Term Without Project SR-78 average daily traffic volumes and are included in **Table 7-4**. This table shows Near-Term With and Without Project freeway volumes. This table also compares levels of service and volume to capacity (V/C) ratios, and indicates if the project has or has not a significant freeway impact. At levels of service "E" or "F" an increase in V/C ratio of no more than 0.01 is acceptable. As shown in this table, segments at level of service "E" have V/C increases of less than 0.01 so that the project has less than significant impacts to SR-78 mainlines.

8.0 BUILDOUT ALTERNATIVE 1

The land use for the Quarry Creek Master Plan remains the same for each of the two street network alternatives.

The base street network for Alternative 1 assumes all roadways that are included in the City of Carlsbad and City of Oceanside General Plan Circulation Plans. The Alternative 1 street network assumes the extension of Marron Road from the existing east end at the Quarry Creek Shopping Center property line, to the existing west end approximately 1,000 feet east of El Camino Real within the City of Carlsbad. This alternative includes the Rancho Del Oro interchange with State Route 78 and the extension to the south to connect with Marron Road.

The SANDAG Series 11 Combined North County Traffic Model was used for each alternative to predict Buildout average daily traffic volumes. A select zone plot of project only traffic distribution was also prepared to provide an indication of project only traffic distribution percentages.

Figure 8-1 shows the project only vehicle trip distribution percentages for Alternative 1.

Figure 8-2 includes the project only average daily traffic volumes based on the select zone trip distribution.

Figure 8-3 shows the study area street network with average daily traffic volumes for Alternative 1 without project traffic.

Figure 8-4 includes the Alternative 1 full Buildout average daily traffic volumes with project traffic.

8.1 STREET SEGMENTS WITHIN OCEANSIDE

Table 8-1 displays the Buildout Alternative 1 average daily traffic volumes without and with project traffic. The project would have a significant impact to street segments if a segment is at level of service E or F and the increase in volume to capacity ratio due to added project traffic is greater than 0.02. This table indicates that all segments evaluated within Oceanside would operate acceptably with project traffic added except at four locations. These segments would be at LOS F without or with project traffic. The project would have a significant cumulative impact at only two of these segments:

- College Boulevard between Vista Way and Plaza Drive (a six-lane Major Arterial); the project fair share is 15.5%;
- College Boulevard between Marron Road and the southern City limit (a four-lane Major Arterial); the project fair share is 6.4%.

A peak hour segment analysis was conducted for the deficiently operating College Boulevard corridor and the results are shown in **Table 8-1-A**. This analysis indicates one additional segment of this corridor would have a significant project impact.

• College Boulevard (Plaza Drive to Marron Road – Lake Boulevard). The average travel speed decreases by more than one mile per hour with project traffic added, which indicates a significant impact. The project fair share is 32.8%.

Mitigation Recommendations: Since physical improvements are infeasible, the Final City of Oceanside Circulation Element Update EIR recommends reclassification of these segments from a six-lane Major Arterial, and four-lane Major Arterial, to six-lane Prime Arterials. This reclassification would mitigate

the project significant impact. However, the Oceanside Update considers roadway reclassification as infeasible, so that the Oceanside Update Final EIR recommends adoption of Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Vista Way	College Blvd. to SR-78 WB Ramps	WB	9.4	9.4	F	F	9.8	9.7	F	F

Notes:

At LOS "E" or "F", if the segment travel speed decreases by more than one MPH due to the addition of project traffic, the project will have a significant impact.

^{*}Shading inidcates a significant impact.

• Vista Way, between College Boulevard ad the SR-78 westbound ramps. This segment is at level of service "F" under Buildout Alternative 1 conditions without and with project traffic added. The project change in volume to capacity ratio is no more than 0.020, at 0.020, so that project impacts are less than significant. A peak hour segment analysis also indicates the project impact is less than significant on this segment since the addition of project traffic does not reduce the segment travel speed by more than one mile per hour, as indicated in **Table 8-1-A**.

No other segments evaluated within the City of Oceanside would be significantly impacted by project traffic for the Buildout Alternative 1 condition.

8.2 STREET SEGMENTS WITHIN CARLSBAD

Project only AM and PM peak hour traffic volumes were added to Buildout Alternative 1 peak hour traffic volumes between study area intersections within Carlsbad and the results are shown in **Table 8-2**.

As shown in this table, all evaluated street segments within Carlsbad would operate acceptably with project traffic added to Buildout Alternative 1 peak hour volumes on roadway segments between intersections.

8.3 INTERSECTIONS

The Oceanside Circulation Element Update April 2012 Final Program EIR includes peak hour volumes at intersections for their base condition, which used the same SANDAG Series 11 Combined North County Model as the base forecast that was used for the Buildout Alternative 1 forecast volumes, but without the full Quarry Creek Master Plan included. That Final EIR was used to prepare the peak hour volumes at intersections within the study area, with adjustments to add project only peak hour traffic.

Figure 8-5 shows the project only AM and PM peak hour traffic volumes for each traffic movement at study area intersections. These vehicle trips were distributed based on the trip distribution percentages previously shown in Figure 8-1.

Figure 8-6 displays the base Buildout Alternative 1 intersection peak hour volumes, without project traffic.

Figure 8-7 includes project only peak hour traffic added to the base Buildout Alternative 1 traffic.

Figure 8-8 shows intersection lane configurations for Buildout Alternative 1 conditions.

Page 3 of 3

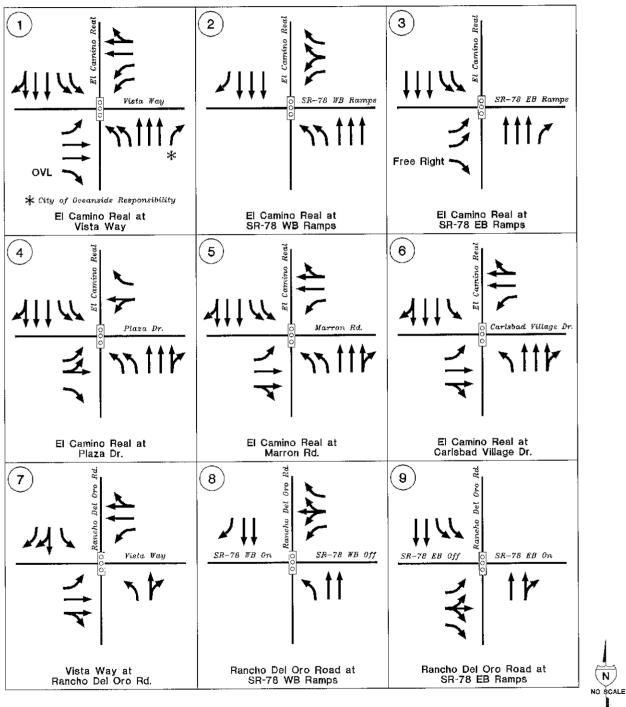

FIGURE 8-8
Buildout Alternative 1 Lane Configurations

Table 8-3 compares the peak hour intersection levels of service without and with project traffic added to Buildout Alternative 1 peak hour volumes. Also included in this table is the change in control delay at each intersection due to the addition of project traffic. An increase in average control delay greater than 2.0 seconds, at level of service E or F, indicates a significant project impact.

The intersection lane configurations for the intersections listed in Table 8-3 are the same as for existing conditions and do not include planned mitigation by the City of Oceanside as a result of other traffic studies.

Only two intersections are expected to operate at level of service "E" under Buildout Alternative 1 conditions.

• El Camino Real / Vista Way is at level of service "E" during the PM peak hour without or with project traffic. The change in average control delay is not greater than 2.0 seconds, at 0.4 secons, so that project impacts are less than significant and no project mitigation is required.

Table 8-3-A lists the five intersections with planned but mostly unfunded improvements by the City of Oceanside, including the El Camino Real / Vista Way intersection. The addition of a northbound right-turn-only lane on College Boulevard to eastbound Vista Way would mitigate the deficient level of service at the location.

College Boulevard / Marron Road – Lake Boulevard is at level of service "E" during the PM peak hour without or with project traffic. The change in average control delay with the addition of project traffic is greater than 2.0 seconds so that the project would have a significant cumulative impact. A project fair share contribution towards mitigation is recommended. The project fair share is 13.3%

F Over 80.0

LOS

SECONDS

S? = Significant Impact: Yes (Y) or No (N). (Significant at LOS E or F and change in delay is greater than 2.0 seconds)

The planned but unfunded mitigation at this location, as identified in the Oceanside Circulation Element Update FEIR, is the addition of a second northbound right-turn-only lane to eastbound Lake Boulevard. As shown in **Table 8-3-A** the addition of the second right turn only lane provides mitigation for the deficient operation at this location.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

8.4 STATE ROUTE 78 MAINLINES

The project traffic volumes are included in Buildout Alternative 1 SR-78 average daily traffic volumes shown in **Table 8-4**. This table shows freeway volumes without and with project traffic. This table also compares levels of service and volume to capacity (V/C) ratios, and indicates if the project has or has not a significant freeway impact. At levels of service "E" or "F" an increase in V/C ratio of no more than 0.01 is acceptable. As shown in this table, segments at level of service "E" or "F" have V/C increases of less than 0.01 so that the project has less than significant impacts to SR-78 mainlines.

<u>Appendix D</u> includes the Alternative 1 traffic model documentation and intersection levels of service worksheets.

Legend:

Cap. = Capacity

Mainlane Cap. @ 2,350 VPHPL

Auxillary Lane Cap.@ 1,800 VPHPL

ADT= Average Daily Traffic

V/C= Volume to Capacity Ratio

LOS=Level of Service

Direction Split = % of Peak Hour in Peak Direction

Truck Factor = Represents Capacity Reduction for Heavy Vehicles

Notes:

- (1) Source: Caltrans 2010 Traffic Volumes.
- (2) Highway Capacity Manual (2000) EQN. (3-2); assume 5% trucks plus RVs.
- (3) Caltrans District 11 LOS Estimation Procedures, See Table 2-3
- S? = Significant Impact: Yes (Y), No (N).
- (At LOS E or F, an increase in V/C of no more than 0.01 is acceptable).

9.0 BUILDOUT ALTERNATIVE 2

The land uses for the Quarry Creek Master Plan remain the same for Alternative 2 as was used for Alternative 1.

The street network for Alternative 2 is the same as Alternative 1, except for the deletion of Marron Road between the Quarry Creek Master Plan west boundary and the existing extension east of El Camino Real in Carlsbad. The Rancho Del Oro / SR-78 interchange is included, but the Rancho Del Oro extension to the south of the interchange is deleted.

The SANDAG Series 11 Combined North County Traffic Model was used for this alternative, with the street network change described above. A select zone plot was prepared to show project only traffic volumes and to establish the project only trip distribution percentages.

Figure 9-1 shows the project only vehicle trip distribution percentages for Alternative 2.

Figure 9-2 includes the project only average daily traffic volumes based on the select zone trip distribution.

Figure 9-3 shows the study area street network with average daily traffic volumes for Alternative 2 without project traffic.

Figure 9-4 includes the Alternative 2 full Buildout average daily traffic volumes with project traffic included.

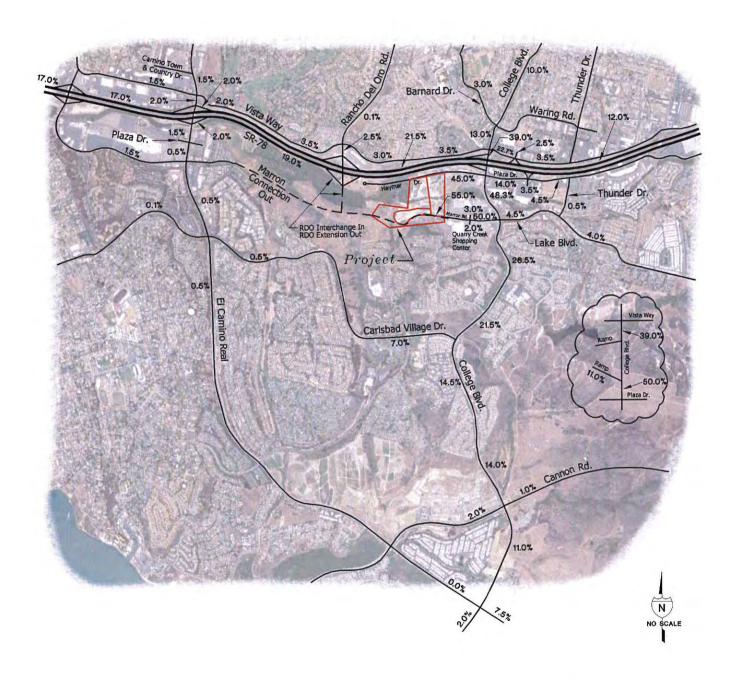

FIGURE 9-1

Buildout ADT Volumes - Alternative 2
With Project

9.1 STREET SEGMENTS WITHIN OCEANSIDE

Table 9-1 compares the Buildout Alternative 2 average daily traffic volumes without and with project traffic. The project would have a significant impact to street segments if a segment is at level of service E or F and the increase in volume to capacity ratio due to added project traffic is greater than 0.02. This table indicates that all segments evaluated within Oceanside would operate acceptably with project traffic added except at four locations. As with Alternative 1, these segments would be at LOS F without or with project traffic. The project would have a significant impact at only two of these segments, the same as for the Alternative 1 analysis:

- College Boulevard between Vista Way and Plaza Drive (a six-lane Major Arterial); the project fair share is 20.1%;
- College Boulevard between Marron Road and the southern City limit (a four-lane Major Arterial); the project fair share is 7.3%.

A peak hour segment analysis was conducted for the deficiently operating College Boulevard corridor and the results are shown in **Table 9-1-A**. This analysis indicates one additional segment of this corridor would have a significant project impact.

 College Boulevard (Plaza Drive to Marron Road – Lake Boulevard). The average travel speed decreases by more than one mile per hour with project added, which indicates a significant impact.
 The project fair share is 28.6%.

Mitigation Recommendations: Since physical improvement are infeasible, the Final, April 2012, City of Oceanside Circulation Element Update EIR recommends reclassification of these segments from a six-lane Major Arterial, and four-lane Major Arterial, to six-lane Prime Arterials. This reclassification and widening would mitigate the project significant impacts.

Notes:

At LOS "E" or "F", if the segment travel speed decreases by more than one MPH due to the addition of project traffic, the project will have a significant impact.

^{*}Shading inidcates a significant impact.

However, the Oceanside Update considers roadway reclassification as infeasible, so that the Oceanside Update Final EIR recommends adoption of Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way, between College Boulevard and the SR-78 westbound ramps. This segment is at level of service "F" without or with project traffic added. The project change in volume to capacity ratio is greater than 0.02, at 0.04, so that this is a significant cumulative project impact.

The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the update, these improvements would not fully mitigate segment impacts so that overriding considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

9.2 STREET SEGMENTS WITHIN CARLSBAD

Project only AM and PM peak hour traffic volumes were added to Buildout Alternative 2 peak hour traffic volumes between study area intersections within Carlsbad and the results are shown in **Table 9-2**.

As shown, and the same as Alternative 1, all evaluated street segments within Carlsbad would operate acceptably, and project impacts would be less than significant to Carlsbad roadway segments.

D = Direction

(1) = Based on 1,800 vehicles per lane per hour.

V/C=Volume divided by capacity

Source: Highest Approach Volumes at Intersections, taken from Figure 9-7.

V/C	LOS
0.00-0.60	Α
0.61-0.70	В
0.71-0.80	C
0.81-0.90	D
0.91-1.00	E
Over 1.00	F

9.3 INTERSECTIONS

The intersection peak hour volumes used for Alternative 1 were modified to account for the project only redistribution without the Marron Road extension.

Figure 9-5 shows the project only AM and PM peak hour traffic volumes for each study area intersection. These trips were distributed according to the trip distribution percentages shown in **Figure 9-1**.

Figure 9-6 shows the Buildout Alternative 2 intersection peak hour volumes, without project traffic.

Figure 9-7 includes project only peak hour traffic added to the Buildout Alternative 2 traffic.

Figure 9-8 shows intersection lane configurations for Buildout Alternative 2.

Table 9-3 compares the peak hour intersection levels of service without and with project traffic added to Buildout Alternative 2 peak hour volumes. A change in average control delay is also included in this table, showing the effect of project traffic. An increase in average control delay, at level of service E or F, if more than 2.0 seconds, indicates a significant project impact.

The intersection lane configurations for the intersections listed in Table 9-3 are the same as for existing conditions and do not include the planned mostly unfunded mitigation by the City of Oceanside as a result of other traffic studies.

(1) = Roundabout: Delay is not applicable; LOS is based on V/C; AM and PM V/C is at LOS A.

Notes: N/A = Not Built

City: OS = Oceanside

CB = Carlsbad

D = Control Delay LOS = Level of Service

Δ D = Change in Delay S ? = Significant Impact: Yes (Y) or No (N). (Significant at LOS E or F and change in delay is greater than 2.0 seconds)

	LOS	SECONDS DELAY
- [A	0.0-10.0
	В	10.1-20.0
	C	20.1-35.0
	D	35.1-55.0
	E	55.1-80.0
	F	Over 80.0

Only two intersections are expected to operate at level of service "E" under Buildout Alternative 1 conditions:

• El Camino Real / Vista Way is at level of service "E" during the PM peak hour without or with project traffic. The change in average control delay is not greater than 2.0 seconds, at 0.5 second, so that project impacts are less than significant and no project mitigation is required.

Table 9-3-A lists the five intersections with planned but mostly unfunded improvements by the City of Oceanside, including the El Camino Real / Vista Way intersection. The addition of a northbound right-turn-only lane on College Boulevard to eastbound Vista Way would mitigate the deficient level of service at this location.

• College Boulevard / Marron Road – Lake Boulevard is at level of service "E" during the PM peak hour without or with project traffic. The change in average control delay with the addition of project traffic is greater than 2.0 seconds so that the project would have a significant cumulative impact. A project fair share contribution towards mitigation is recommended. The project fair share is 61.2%.

The planned but unfunded mitigation at this location, as identified in the Oceanside Circulation Element Update FEIR, is the addition of a second northbound right-turn-only lane to eastbound Lake Boulevard. As shown in **Table 9-3-A** the addition of the second right turn only lane provides mitigation for the deficient operation at this location.

Buildout Alternative 2 project traffic effects at all other study area intersections would also be less than significant.

TABLE 9-3-A

9.4 STATE ROUTE 78 MAINLINES

The project traffic volumes are included in Buildout Alternative 2 SR-78 average daily traffic volumes shown in **Table 9-4**. This table shows freeway volumes without and with project traffic. This table also compares levels if service and volume to capacity (V/C) ratios, and indicates if the project has or has not a significant freeway impact. At levels of service "E" or "F" an increase in V/C ratio of no more than 0.01 is acceptable. As shown in this table, segments at level of service "E" or "F" have V/C increases of less than 0.01 so that the project has less than significant impacts to SR-78 mainlines.

<u>Appendix E</u> includes the Alternative 2 traffic model documentation and intersection levels of service worksheets.

Legend:

Cap. = Capacity

Mainlane Cap. @ 2,350 VPHPL

Auxillary Lane Cap.@ 1,800 VPHPL

ADT= Average Daily Traffic

V/C= Volume to Capacity Ratio

LOS= Level of Service

Direction Split = % of Peak Hour in Peak Direction

Truck Factor = Represents Capacity Reduction for Heavy Vehicles

Notes:

- (1) Source: Caltrans 2010 Traffic Volumes.
- (2) Highway Capacity Manual (2000) EQN. (3-2); assume 5% trucks plus RV's.
- (3) Caltrans District 11 LOS Estimation Procedures, See Table 2-3
- S? = Significant Impact: Yes (Y), No (N).
- (At LOS E or F, an increase in V/C of no more than 0.01 is acceptable).

10.0 PROJECT CIRCULATION ROADWAYS

The project circulation roadways are shown on the attached Quarry Creek site plans, with AM and PM peak hour volumes shown at the project intersections.

10.1 ALTERNATIVE 1

Figure 10-1 shows the circulation roadway within the project with the assumed connection of Marron Road through the open space area to the west of the project boundary. The Marron Road / Street B intersection is recommended to be signalized with this alternative.

10.2 ALTERNATIVE 2

Figure 10-2 shows these circulation roadways and peak hour volumes at project intersections.

The Marron Road / Street B intersection would be a round-about controlled intersection with this alternative since there would be no through traffic on Marron Road and the traffic volumes would be lower than for Alternative 1.

Under both of these alternatives, the internal circulation roadways, Street A and Street B will have onstreet parking prohibited, with bike lanes. These local streets will be of sufficient capacity to adequately accommodate the expected low volumes.

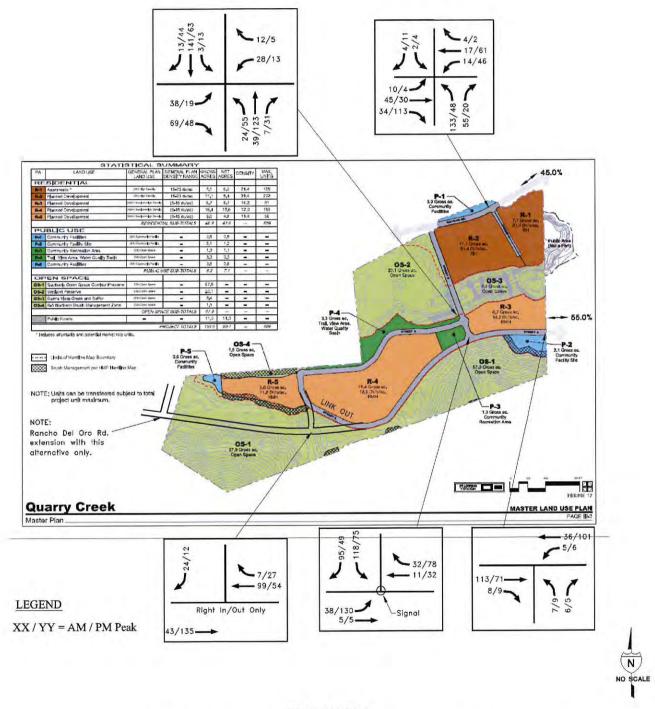

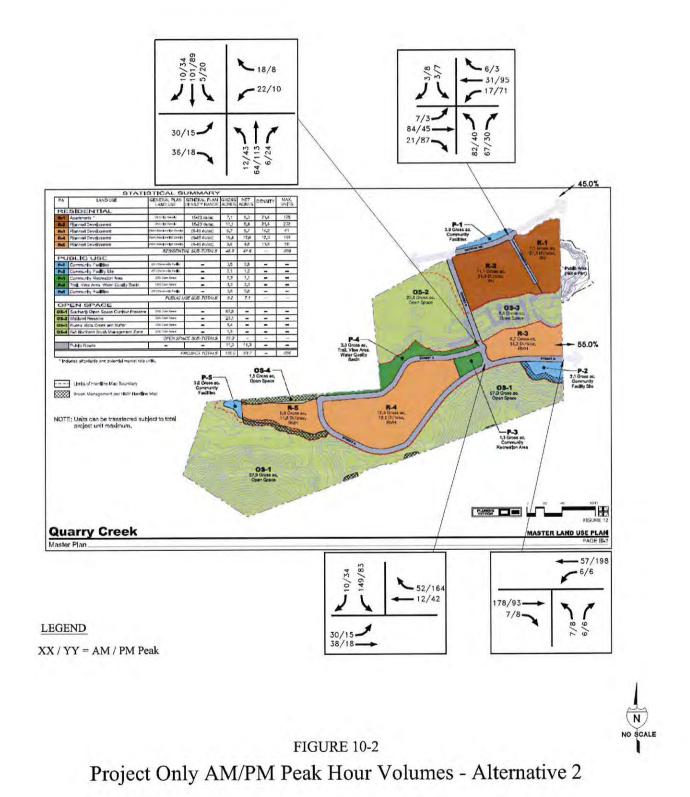

FIGURE 10-1
Project Only AM/PM Peak Hour Volumes - Alternative 1

11.0 PEDESTRIAN / TRANSIT MASTER PLAN GUIDELINES

The Quarry Creek Master Plan has established a pedestrian, bike, and trail circulation plan.

Figure 11-1 shows an excerpt from the Master Plan indicating pedestrian trails, sidewalks and bike lanes.

Section 7.3 of this Quarry Creek Master plan shows the vehicular circulation plan, indicating the future bus transit route that will extend from the existing Quarry Creek Shopping Center to the planned park and ride lot within the Quarry Creek Master Plan area. This is shown in **Figure 11-2**.

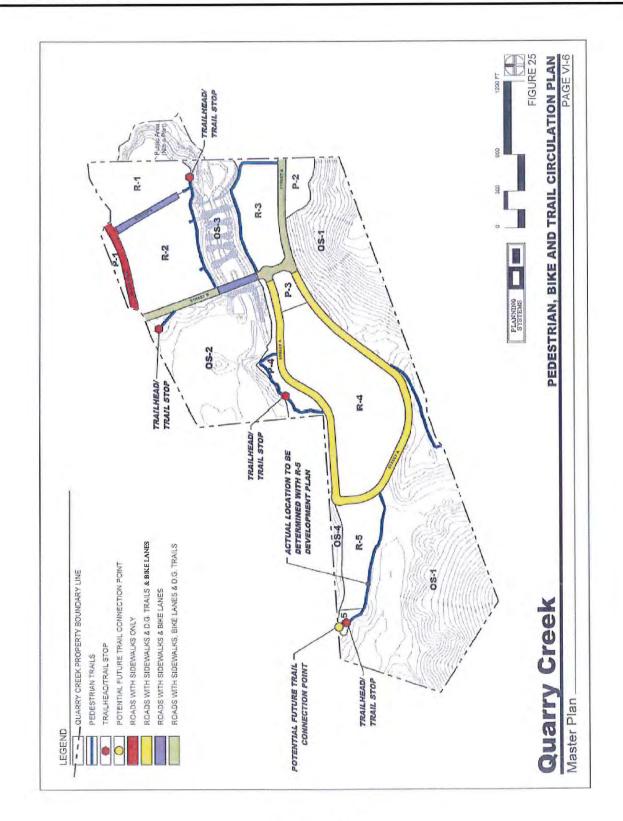

FIGURE 11-1
Pedestrian, Bike and Trail Circulation Plan

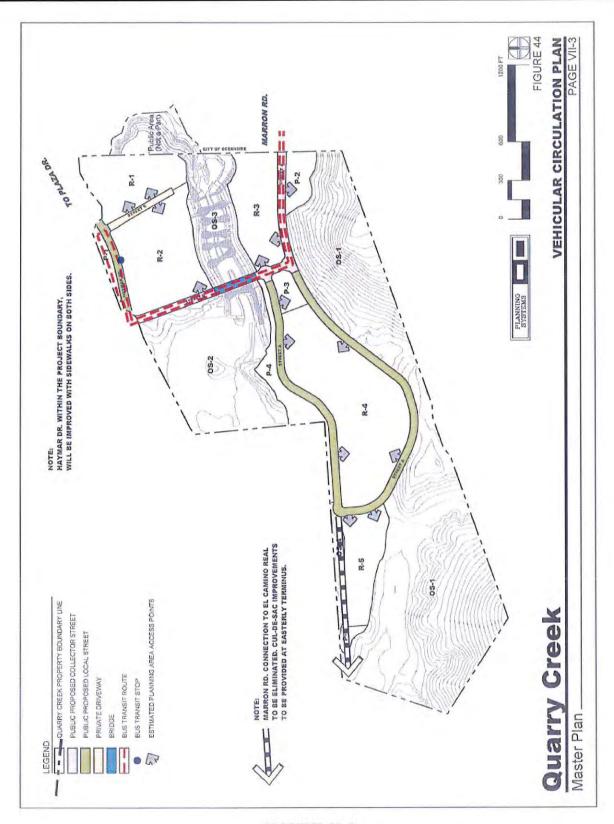

FIGURE 11-2
Vehicular Circulation Plan

12.0 CONCLUSIONS AND RECOMMENDATIONS

This report evaluates potential traffic impacts due to development of the 656 dwelling unit Quarry Creek Master Plan. The Quarry Creek Master Plan also includes 1.5 net acres of community facilities that might include a day-care, and a 0.9 acre park and ride lot.

The project is expected to generate 5,578 average daily vehicle trips, 469 AM peak hour trips (121 inbound; 348 outbound), and 572 PM peak hour trips (386 inbound; 186 outbound). External trips have been adjusted down slightly to account for a transit reduction for planning area R-1, R-2, and R-3, which will be within one-fourth mile of transit service. The transit reduction decreases average daily vehicle trips by 2.8% and AM / PM peak hour trips by 2.6%.

The project is located in northern Carlsbad and will have access from Marron Road, which currently extends through the Quarry Creek Shopping Center from College Boulevard in the City of Oceanside.

This traffic analysis was conducted for Existing Conditions, Project Plus Existing Conditions, Near-Term and Near-Term Plus Project Conditions, Buildout and Buildout Plus Project Conditions.

The Existing Conditions, Project Plus Existing Conditions, Near-Term and Near-Term Plus Project Conditions evaluations were conducted assuming the current existing street network without the future extensions of Marron Road to the west to connect with El Camino Real, and without the State Route (SR) 78 / Rancho Del Oro Road interchange, and the Rancho Del Oro Road extension to Marron Road.

The Buildout and Buildout Plus Project Conditions were evaluated for two street network alternatives:

<u>Alternative 1</u> – This street network assumes all roadways that are included in the City of Carlsbad and City of Oceanside General Plan Circulation Plans. This street network assumes the extension of Marron Road from the existing east end at the Quarry Creek Shopping Center property line, to the existing west end approximately 1,000 feet east of El Camino Real, all within the City of Carlsbad.

<u>Alternative 2</u> – This street network assumes the Rancho Del Oro Road interchange at SR-78 is constructed, but the Marron Road extension is not included, nor is the Rancho Del Oro Road extension to Marron Road.

Significance Thresholds

In order to determine if the project would have a significant traffic impact on roadway segments or intersections, both the SANTEC / ITE Guidelines and the City of Carlsbad Growth Management Plan Circulation Performance Standard were used.

- 1. If the addition of project traffic to a roadway segment or intersection causes the level of service to decrease from "D" to "E" or "F", then the project is considered to have a significant impact.
- 2. If a facility is at level of service "E" or "F" before the addition of project traffic, then the following changes are allowed:

- Roadway Segments An increase in the volume to capacity (v/c) ratio based on average daily
 traffic volumes, of no more than 0.02 is acceptable. However, a segment peak hour analysis must
 be completed under project conditions to determine peak hour significance of project impacts. A
 decrease in segment average travel speed of greater than one mile per hour indicates a significant
 impact.
- Intersections An increase in delay of no more than 2.0 seconds is acceptable.
- Freeways An increase in volume to capacity (V/C) ratio of no more than 0.01 is acceptable.

Provided below are conclusions and recommendations that describe project traffic impacts and possible mitigation.

12.1 EXISTING CONDITIONS

Street Segments Within Oceanside

Of the 18 study area street segments in Oceanside only two segments currently operate deficiently:

• Vista Way between College Boulevard and the SR-78 westbound ramps.

Mitigation: The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these

improvements would improve peak hour operations but would not fully mitigate segment impacts, so that overriding considerations should be adopted.

• Lake Boulevard between Thunder Drive and Sundown Lane, at LOS "E".

Mitigation: Widen to a 4-lane Secondary Collector with two-way left turn lane. However, the Oceanside Circulation Element Update Final EIR recommends retaining this segment as two lanes and adopting Overriding Considerations, due to an agreement between the City and the residents to maintain this as a two lane road with a two-way left turn lane pocket.

Street Segments Within Carlsbad

Of the 11 roadway segments evaluated in Carlsbad, no segments evaluated operate deficiently during the AM and PM peak hours, as required by the City's Growth Management Plan.

Intersections

Within Oceanside, 14 intersections were evaluated and none currently operate deficiently.

Within Carlsbad, five intersections were evaluated and none currently operate deficiently.

State Route 78 Mainlines

Four segments of State Route 78 were evaluated, and one currently operates at level of service "E" during peak hours.

El Camino Real to College Boulevard (LOS "E").

Mitigation: Regional SR-78 studies are currently being conducted by SANDAG / Caltrans, and improvements to add High Occupancy Vehicle (HOV) lanes have been included in the Year 2050 Regional Transportation Plan.

12.2 PROJECT PLUS EXISTING CONDITIONS

The Project Plus Existing Conditions were evaluated for significant impacts due to the addition of project traffic to existing conditions volumes.

Street Segments Within Oceanside

Two segments in Oceanside would have significant direct project impacts:

College Boulevard, between Vista Way and Plaza Drive.
 (Project Responsibility – 100%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of this segment of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Vista Way, between College Boulevard and the SR-78 westbound ramps. This segment is at level of service "E" under existing conditions and with project traffic added. The project change in volume to capacity ratio is greater than 0.02, at 0.041, so this would be a significant impact.
 (Project Responsibility – 100%)

Mitigation Recommendation: The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Street Segments in Carlsbad

Project traffic impacts would be less than significant.

Intersections

Project traffic impacts would be less than significant at intersections within Oceanside and Carlsbad.

State Route 78 Mainlines

Project traffic impacts would be less than significant to State Route 78 segments evaluated.

12.3 NEAR-TERM PLUS PROJECT CONDITIONS

The Near-Term cumulative impacts from other approved and reasonably feasible pending projects that are expected to influence the study area at approximately the same time frame as the Quarry Creek project were evaluated without and with project traffic added.

No additional significant project impacts were identified for this condition beyond those previously discussed in prior sections of this report.

Street Segments Within Oceanside

Five street segments in Oceanside would operate deficiently at level of service "E" or "F", and three segments would have a significant direct impact.

- El Camino Real between Vista Way and the SR-78 westbound ramp, level of service "E", but project impacts are less than significant.
- College Boulevard between Vista Way and Plaza Drive, level of service "F", the project impact is a significant direct impact.

(Project Responsibility – 45.8%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of segments of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial. This reclassification would mitigate the project significant impact. However, the Oceanside Update considers roadway reclassification infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way between College Boulevard and the SR-78 westbound ramps, at level of service "F", the project impact is a significant direct impact.

(Project Responsibility – 25.5%)

Mitigation Recommendation: The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Lake Boulevard between Thunder Drive and Sundown Lane, at level of service "F", but the project impact is less than significant, so no project mitigation is required.

Street Segments Within Carlsbad

Of the 11 roadway segments evaluated in Carlsbad, no segments evaluated operate deficiently during the AM and PM peak hours, as required by the City's Growth Management Plan.

Intersections

One intersection is Oceanside would operate deficiently, at level of service "E" during the PM peak hour, but the project impact is less than significant.

• El Camino Real / Vista Way, at level of service "E" during the PM peak hour, but the project impact is less than significant so that no project mitigation is required.

Intersections within Carlsbad would operate acceptably so project impacts would be less than significant and no project mitigation is required.

State Route 78 Mainlines

Project traffic impacts would be less than significant.

12.4 BUILDOUT ALTERNATIVE 1

Street Segments Within Oceanside

Five segments are expected to be at level of service "F" during Buildout of Alternative 1, but only three would have a significant cumulative project impact.

• College Boulevard between Barnard Way and Vista Way, at level of service "F", but the project impact is less than significant.

- College Boulevard between Vista Way and Plaza Drive, at level of service "F", and the project impact is a significant cumulative impact.
 (Project Responsibility 15.5%)
- College Boulevard between Plaza Drive and Marron Road, at level of service "F" as determined by a peak hour segment analysis, and the project impact is a significant cumulative impact.
 (Project Responsibility 32.8%)
- College Boulevard between Marron Road and the south City limit, at level of service "F", and the project impact is a significant cumulative impact.
 (Project Responsibility 6.4%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of these segments of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial and a four-lane Major Arterial to a six-lane Major Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification and widening infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segments are located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way between College Boulevard and the SR-78 westbound ramps, at level of service "F", but the project impact is less than significant as indicated by the allowable increase in volume to capacity ratio and a peak hour segment analysis that shows a decrease in average travel speed of no more than one mile per hour. No project mitigation is required.

Street segments within Carlsbad are expected to operate acceptably during peak hours as required by the City's Growth Management Plan.

Intersections

Two intersections within Oceanside are expected to be at deficient levels of service, one has less than a significant project impact and the other has a significant cumulative impact.

- El Camino Real / Vista Way, at level of service "E" during the PM peak, but the project impact is less than significant with no project mitigation required.
- College Boulevard / Marron Road Lake Boulevard, at level of service "E" during the PM peak hour. The project will have a significant cumulative impact at this intersection, and should contribute a fair-share of the planned mitigation.

(Project Responsibility – 13.3%)

Mitigation: The Oceanside Circulation Element Update Final EIR recommends adding a second northbound right-turn only lane on College Boulevard to eastbound Lake Boulevard.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted intersection is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

State Route 78 Mainlines

Project traffic impacts would be less than significant.

12.5 BUILDOUT ALTERNATIVE 2

Street Segments Within Oceanside

Five segments are expected to be at level of service "F" during Buildout of Alternative 1, but only three would have a significant cumulative project impact.

- College Boulevard between Barnard Way and Vista Way, at level of service "F", but the project impact is less than significant.
- College Boulevard between Vista Way and Plaza Drive, at level of service "F", and the project impact is a significant cumulative impact.

(Project Responsibility – 20.1%)

- College Boulevard between Plaza Drive and Marron Road, at level of service "F" as a result of a peak hour segment analysis, and the project impact is a significant cumulative impact.
 (Project Responsibility 28.6%)
- College Boulevard between Marron Road and the south City limit, at level of service "F", and the project impact is a significant cumulative impact.
 (Project Responsibility 7.3%)

Mitigation Recommendation: Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Element Update recommends reclassification of these segments of College Boulevard from a six-lane Major Arterial to a six-lane Prime Arterial and a four-lane Major Arterial to a six-lane Major Arterial. This reclassification would mitigate the project significant impacts. However, the Oceanside Update considers roadway reclassification and widening infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segments are located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

• Vista Way between College Boulevard and the SR-78 westbound ramps, at level of service "F" with or without project traffic, and the project impact is significant cumulatively as indicated by the increase in volume to capacity of more than 0.02 at 0.04.

(Project Responsibility – 30.8%)

Mitigation Recommendation: The Oceanside Circulation Element Update recommends providing a westbound dedicated right-turn lane and lengthening the westbound left-turn lanes at the College Boulevard / Vista Way intersection by restriping the existing lanes. As stated in the Update, these improvements would improve peak hour operations but would not fully mitigate segment impacts, so that Overriding Considerations should be adopted.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Intersections

Two intersections within Oceanside are expected to be at deficient levels of service, one has less than a significant project impact and the other has a significant cumulative impact.

• El Camino Real / Vista Way, at level of service "E" during the PM peak, but the project impact is less than significant with no project mitigation required.

College Boulevard / Marron Road - Lake Boulevard, at level of service "E" during the PM peak
hour. The project will have a significant cumulative impact at this intersection, and should
contribute a fair-share of the planned mitigation.

(Project Responsibility – 61.2%)

Mitigation: The Oceanside Circulation Element Update Final EIR recommends adding a second northbound right-turn only lane on College Boulevard to eastbound Lake Boulevard.

The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construct such improvements and there does not appear to be a program to accept payments in lieu of construction. Due to the fact that the subject impacted intersection is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmitigable. See CEQA Guidelines Section 15091 (a) (2).

Intersections within Carlsbad are expected to operate acceptably during peak hours as required by the City's Growth Management Plan.

State Route 78 Mainlines

Project traffic impacts would be less than significant.

12.6 MITIGATION SUMMARY

Table 12-1 lists for all alternatives evaluated segments and intersections that will have significant project impacts, and describes the recommended mitigation measures.

12.7 CIRCULATION NETWORK ALTERNATIVES COMPARISON

Two buildout circulation network were evaluated, all using the same Quarry Creek land use plan.

Alternative 1 and 2 both included the Rancho Del Oro interchange at SR-78, while Alternative 2 deleted the extension of Marron Road through the designated Open Space area.

The preferred alternative for the Quarry Creek Investors, LLC is Alternative 2, which deletes the Marron Road extension through the Open Space area.

TABLE 12-1 MITIGATION SUMMARY

ALTERNATIVE	SIGNIFICANT IMPACT WITH PROJECT	MITIGATION
Buildout Alternative 2	Segments: College Blvd. (Vista Way to Plaza Dr.) Impact: Cumulative	Since physical improvements to add lanes are infeasible, the Final, April 2012 City of Oceanside Circulation Elema Update recommends reclassification of this segment College Boulevard from a six-lane Major Arterial to a slane Prime Arterial. This reclassification would mitigate the project significant impacts. However, the Oceansi Update considers roadway reclassification infeasible, so the Oceanside Circulation Element Update Final Element Opdate Final Element Opdat
	College Blvd. (Plaza Dr. to Marron Rd.) Impact: Cumulative	Since physical improvements to add lanes are infeasible, Final, April 2012 City of Oceanside Circulation Elem Update recommends reclassification of this segment College Boulevard from a six-lane Major Arterial to a slane Prime Arterial. This reclassification would mitigate project significant impacts. However, the Oceans Update considers roadway reclassification infeasible, so the Oceanside Circulation Element Update Final Frecommends Overriding Considerations. The changes or alterations are within the responsibility a jurisdiction of the City of Oceanside. The City of Oceans does not appear to have adopted a program to construction in the subject impacted segment is located outs the fact that the subject impacted segment is located outs the jurisdiction and regulatory authority of the City Carlsbad, these impacts are considered significant a unmitigable. See CEQA Guidelines Section 15091 (a) (2 Fair Share: 28.6%
	College Blvd. (Marron Rd. to South City Limit) Impact: Cumulative	The Final, April 2012 City of Oceanside Circulation Elem Update recommends reclassification of this segment College Boulevard from a four-lane Major Arterial to a same Major Arterial. This reclassification would mitigate project significant impacts. However, the Oceans Update considers roadway reclassification and wider infeasible, so that the Oceanside Circulation Element Update Final EIR recommends Overriding Considerations. The changes or alterations are within the responsibility jurisdiction of the City of Oceanside. The City of Oceans does not appear to have adopted a program to construction but the fact that the subject impacted segment is located outs the jurisdiction and regulatory authority of the City Carlsbad, these impacts are considered significant unmitigable. See CEQA Guidelines Section 1509 (a) (2) Fair Share: 7.3%

Page 6 of 6

TABLE 12-1 MITIGATION SUMMARY

ALTERNATIVE	SIGNIFICANT IMPACT WITH PROJECT	MITIGATION
Buildout Alternative 2 (Continued)	Vista Way (College Blvd. to SR-78 WB Ramps) Impacts: Direct	The Oceanside Circulation Element Update recommend providing a westbound dedicated right-turn lane an lengthening the westbound left-turn lanes at the Colleg Boulevard / Vista Way intersection by restriping the existin lanes. As stated in the Update, these improvements woul improve peak hour operations but would not fully mitigat segment impacts, so that Overriding Considerations should be adopted.
		The changes or alterations are within the responsibility and jurisdiction of the City of Oceanside. The City of Oceanside does not appear to have adopted a program to construit such improvements and there does not appear to be program to accept payments in lieu of construction. Due to the fact that the subject impacted segment is located outside the jurisdiction and regulatory authority of the City of Carlsbad, these impacts are considered significant and unmittigable. See CEQA Guidelines Section 15091 (a) (2). Fair Share: 30.8%
0	Intersections:	
	College Blvd. / Marron Rd Lake Blvd) Impact: Cumulative	The Oceanside Circulation Element Update Final El recommends adding a second northbound right-turn on lane on College Boulevard to eastbound Lake Boulevard. The changes or alterations are within the responsibility ar jurisdiction of the City of Oceanside. The City of Oceansid does not appear to have adopted a program to construst such improvements and there does not appear to be program to accept payments in lieu of construction. Due the fact that the subject impacted intersection is located outside the jurisdiction and regulatory authority of the City Carlsbad, these impacts are considered significant ar unmittigable. See CEQA Guidelines Section 15091 (a) (2).

To determine if the Marron Road deletion causes significant impacts, a comparison of intersection levels of service for the alternatives shows that only two intersections would be at unacceptable levels of service (LOS "E" or "F"), without mitigation, for Alternatives 1 and 2.

For Alternatives 1 and 2, both of these locations are at acceptable levels of service. Since alternative 2 includes the deletion of Marron Road, and all evaluated intersections would be at acceptable levels of service after planned mitigation consistent with the Oceanside General Plan Circulation Element Update, it can be concluded that the Alternative 2 deletion of Marron Road would have less than significant impacts.

To isolate the effect of deleting Marron Road with the Rancho Del Oro Road interchange, a comparison of intersection delay at the two intersections with acceptable levels of service after mitigation was conducted for Alternatives 1 and 2.

Table 12-2 below shows the results of this comparison.

Since both intersections are at an acceptable level of service after the same mitigation was applied to both alternatives, it can be stated that the deletion of Marron Road would have less than significant impacts to study area intersections.

Table 12-2
Alternative 1 and Alternative 2 Intersection Delay Comparison

	WITH MARRON RD.	WITHOUT MARRON RD.				
	Alternative 1	Alternative 2				
ECR / Vista Way (PM)	45.6 LOS D	47.8 LOS D				
College Blvd. / Marron Rd. – Lake Blvd.	55.0 LOS D	54.9 LOS D				

As shown, without Marron road, the increase in PM peak hour intersection delay at these two locations is within the allowable delay for an acceptable level of service "D", so that it can be concluded that the Alternative 2 deletion of Marron Road would have less than significant impacts to study area intersections.

This report is site and time specific and is intended for a one-time use for this intended project under the conditions described as "Proposed Project". Any changes or delay in implementation may require re-analysis and re-consideration by the public agency granting approvals. California land development planning involves subjective political considerations as well as frequently re-interpreted principals of law as well as changes in regulations, policies, guidelines and procedures. Urban Systems and their professionals make no warrant, either express or implied, regarding our findings, recommendations, or professional advice as to the ability to successfully accomplish this land development project.

Traffic is a consequence of human behavior and as such is predictable only in a gross cumulative methodology of user opportunities, using accepted standards and following patterns of past behavior and physical constraints attempting to project into a future window of circumstances. Any counts or existing conditions cited are only as reliable as to the time and conditions under which they were recorded. As such the preparer of this analysis is unable to warrant, either express or implied, that any forecasts are statements of actual true conditions which will in fact exist at any future date.

Services performed by Urban Systems professionals resulting in this document are of a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. No other representation expressed or implied and no warranty or guarantee is included or intended in this report, document opinion or otherwise.

Any changes by others to this analysis or re-use of document at a later point in time or other location, without the express consent and concurrence of Urban Systems releases and relieves Urban Systems of any liability, responsibility or duty for subsequent questions, claims, or damages.

PEAK HOUR VOLUME DATA

Peak hour volume data consists of hourly volume relationships and data location. The hourly volumes are expressed as a percentage of the Annual Average Daily Traffic (AADT). The percentages are shown for both the AM and the PM peak periods.

The principle data described here are the K factor, the D factor and their product (KD). The K factor is the percentage of AADT during the peak hour for both directions of travel. The D factor is the percentage of the peak hour travel in the peak direction. KD multiplied with the AADT gives the one way peak period directional flow rate or the design hourly volume (DHV). The design hourly volume is used for either Operational Analysis or Design Analysis. Refer to the 2000 Highway Capacity Manual for more details.

Following is a glossary of terms used in this listing of peak hour volume data:

Dir Indicates direction of travel for peak volume

AADT Annual Average Daily Traffic in vehicles per day (vpd).

AM Peak Represents the morning peak period for traffic analysis

CS Control Station Number, Caltrans identification number for

monitoring site.

CO County abbreviation used by Caltrans

D factor. The percentage of traffic in the peak direction during the

peak hour. Values in this book are derived by dividing the measured PHV by the sum of both directions of travel during the peak hour.

DAY Day of week for the peak volume.

DDHV The directional design hour volume, in vehicles per hour (vph)

DDHV=AADTxKxD. See equation (8-1) on page 8-11 of the 2000

Highway Capacity Manual.

DI Caltrans has twelve transportation districts statewide. This

abbreviation identifies the district in which the count station is

located.

HR The ending time for the peak hour volume listed. The volume

observed fro 1 to 2 would be recorded as 2.

SR. 78

K The percentage of the AADT in both directions during the peak hour. Values in this table are derived by dividing the measured 2-way PHV

by the AADT.

KD The product of K and D. The percentage of AADT in the peak

direction during the peak hour. Values in this table are derived by

dividing the measured 1-way PHV by the AADT.

LEG For traffic counting purposes, a highway intersection or interchange

is assigned two legs according to increasing postmiles (route direction) and with a postmile reference at the center of the intersection or interchange. The volume of traffic on each leg is denoted by an A, B or O. A = ahead leg, B = back leg, and O –

traffic volume being same for both back and ahead legs.

MNTH The month that the peak volume occurred.

PHV Peak Hour Volume in the peak direction. A one way volume in

vehicles per hour (vph) as used here. The PHV is analogous to the

DDHV as used for design purposes.

PM The Post Mile is the mileage measured from the county line, or from

the beginning of a route. Each postmile along a route in a county is

a unique location on the state highway system.

PM Peak Represents the afternoon peak period for traffic analysis.

PRE The postmile may have a prefix like R, T, L, M, etc. When a length of

highway is changed due to construction or realigment, new postmile values are assigned. To distinguish the new values from the old, an

alpha code is prefixed to the new postmile.

RTE The state highway route number

YR The year when the count was made. Traffic counting is on a 3-year

cycle.

2009

Annual Average Daily Truck Traffic

on the

California State Highway System

Compiled by

Traffic and Vehicle Data Systems

State of California

Business, Transportation and Housing Agency

Department of Transportation

Prepared in cooperation with the

U.S. Department of Transportation

Federal Highway Administration

DECEMBER 2010

PREFACE

The annual average daily truck traffic is shown for selected locations on the State Highway System. Truck traffic is classified by number of axles. The two-axle class includes 11/2-ton trucks with dual rear tires and excludes pickups and vans with only four tires. Total vehicle AADT for the same year is taken from the Traffic Volumes on California State Highways booklet also published by the California Department of Transportation.

Annual average daily truck traffic is the total truck traffic volume divided by 365 days. Truck counting is done throughout the state in a counts. The partial day and 24-hour counts are usually made on high volume, urban highways. The 7-day counts are made on low volume, rural highways. The counts are usually taken only once in the year. About one-sixth of the locations are counted annually. The resulting variables that may be present. Annual average daily truck traffic is necessary for presenting a statewide picture of truck flow, evaluating program of continuous truck count sampling. The sampling includes a partial day, 24-hour, 7-day and continuous vehicle classification counts are adjusted to an estimate of annual average daily truck traffic by compensating for seasonal influence, weekly variation, and other truck trends, planning and designing highways and for other purposes. The column entitled "Year Ver/Est" indicates the year the truck percents were either verified (V) or estimated (E). It represents the year the truck percentages were verified (counted continuously or quarterly) or estimated. Selected points on a route will be counted and the ones in between will be estimated. At some locations, truck volumes are static and no new counts are made until there is a change in traffic on the route. All truck AADT's listed are for 2008. California State Highways are listed in legislative route number order. The legislative route number is the same as the signed route number

Each count location is identified by the post mile value corresponding to that point on the highway. The post mile values increase from the beginning of a route within a county to the next county line. The post mile values start over again at each county line. Post mile values increase usually from south to north or west to east depending on the general direction the route follows within the state.

When a section of road is relocated, new post miles (usually noted by an alphabetical prefix such as "R" or "M") are established for it. If relocation results in a change in length, "post mile equations" are introduced so that post miles on the remainder of the route within the The post mile at a given location will remain the same year after year except in a few cases when the route was relocated/redesignated. county will remain unchanged. Post mile equations are not shown on this listing.

TABLE 4.2-3 Circulation Element Roadway Classification LOS & Capacity

Class	Lanes	Cross		i i le	vel of Ser	vice	
		Section ¹	Α	В	С	_D	// E
Expressway	6	102/160, 122/200	30,000	42,000	60,000	70,000	80,000
Expressway	4	102/160, 122/200	25,000	35,000	50,000	55,000	60,000
Prime Arterial	6	104/124	25,000	35,000	50,000	55,000	60,000
6-Lane Major Arterial	6	104/124	20,000	28,000	40,000	45,000	50,000
5-Lane Major Arterial ²	5	102/122	17,500	24,500	35,000	40,000	45,000
4-Lane Major Arterial	4	80/100	15,000	21,000	30,000	35,000	40,000
Secondary Collector (4 lanes with 2- way left turn lane)	4	64/84	10,000	14,000	20,000	25,000	30,000
Secondary Collector (4 lanes without 2- way left-turn lane, with left turn pockets)	4	54/74, 60/80	9,000	13,000	18,000	22,000	25,000
Collector (commercial fronting, 2-lanes with 2-way left turn lane) ³	2	50/70	5,000	7,000	10,000	13,000	15,000
Collector (residential streets in the Circulation Element or industrial fronting)	2	40/60, 50/70	4,000	5,500	7,500	9,000	10,000
Local Street (residential streets NOT in the Circulation Element)	2	36/56, 40/60	-	-	2,200		

Note:

- 1. Cross sections are listed as curb-to-curb width/total right-of-way width, in feet.
- 2. Vandegrift Boulevard is the only roadway designated as a 5-Lane Major Arterial. It is not intended that other roadways be built to 5-lane Major Arterial standards.
- 3. This capacity will also be assumed for two-lane, one-way collectors.

Source: IBI Group, 2011.

Based on discussion with the City and a review of the roadway level of service standards and capacities throughout the San Diego region and southern California, it was determined that LOS D be used as the segment level threshold for acceptable LOS in this study.

For facilities that are forecast to operate at a deficient LOS in the final selected preferred alternative condition, mitigation measures are recommended to return the LOS value back to an acceptable level of service. The City may decide to give a statement of overriding consideration for a facility with unavoidable significant impacts that cannot be mitigated to achieve the desirable LOS threshold. According to the California Environmental Quality Act (CEQA), the City must state the specific reasons supporting the action based on the SOURCE OF SEGMENT LOS FOR OCEAUSIDE Final EIR or other substantial evidence in the record.

Near-Term Without Project

- OTHER PROJECTS DESCRIPTIONS
- INTERSECTION LOS WORKSHEETS

7.0 Existing + Project (Phase 1D & 1E ONLY) ANALYSES

7.1 Trip Generation

Land uses which are expected to be constructed by Year 2010, were considered for existing plus project (Phase 1D & 1E Only) analysis. Based on the land use phasing described in Section 2.3, the following land uses were considered for Existing + Project (Phase 1D & 1E Only) analysis:

Phase 1D: Commercial Development Asset Property – Hotel Site. According to the El Corazon Land Use Master Plan Project Report dated June 28th, 2005 the hotel is planned to be developed in an urban compact form due to its near location near the Village Commercial district. Therefore, a trip generation for Hotel (w/convention facilities/restaurants) was considered for this land use.

Phase 1E: Commercial Development Asset Property – Village Commercial. Based on the El Corazon Land Use Master Plan Project and Report dated June 28th, 2005, the Village Commercial will contain specialty retail that is complementary and compatible to adjacent park, community, and cultural and surrounding land uses. Based on this description, since high generation retail anchor is planned and based on the proposed nature of this commercial, a trip generation for Specialty Retail/Strip Commercial was utilized for this land use.

The trip generation for both the land uses was calculated based on the SANDAG publication "Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region", April 2002. *Table 7–1* summarizes the trip generation calculations for both the project sites.

Additionally, the Village commercial traffic generation was divided into primary trips and pass-by trips due to the percentage of pass-by trips attracted to this type of development. Pass-by trips are trips attracted from traffic already on the street system passing near the site while going from one location to another such as work to retail to home. This is as opposed to primary trips in which the trip returns to its place of origin such as home to grocery store to home. Table 7-1 shows the breakdown of primary trips and pass-by trips for the existing + project (Phase 1D & 1E Only) project site.

Appendix B contains a detailed description of pass-by trips as contained in the Institute of Transportation Engineers (ITE) Trip Generation Manual. As seen on Table 7-1, the project (Phase 1) is calculated to generate a total of 7,960 primary daily trips, with 285 trips (171 inbound and 114 outbound trips) in the AM peak hour and 702 trips (363 inbound and 339 outbound trips) in the PM peak hour.

7.2 Trip Distribution/Assignment

The project-generated traffic was distributed to the street system based on a SANDAG Select Zone Assignment (SZA). The SZA uses the land-use assumptions in the Cities/County Transportation Forecast to distribute traffic volumes generated by the project site throughout the region. It is from this forecasted distribution (as well as existing traffic counts and the project's location in relation to the I-5, SR-76 and SR-78 freeways) that the general regional traffic distribution is deduced.

PROJECT TRIP ASSIGNMENT

55-100702.003 MAY 2011

TRANSPORTATION STUDY FOR THE WESTFIELD PLAZA CAMINO REAL REVITALIZATION PROJECT

March 2010

Prepared for:

WESTFIELD LLC

Prepared by:

GIBSON TRANSPORTATION CONSULTING, INC.

660 S. Figueroa Street, Suite 1120 Los Angeles, California 90017 (213) 683-0088

Ref: J1017

Trip Generation Estimates for Vacant Leasable Space

The trip generation rates used in this study are those identified for a 'Super Regional Shopping Center' land use in the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, San Diego Association of Governments (SANDAG), April 2002. These estimates are conservative in that they do not account for trip reductions from pass-by trips. Table 14 provides a summary of the trip generation rates and estimates for the vacant Robinson's-May building. As shown in the table, it is estimated that the existing vacant leasable space would generate a total of 5,186 daily trips on a typical weekday, including approximately 207 morning peak hour trips (145 inbound, 62 outbound) and 519 afternoon peak hour trips (260 inbound, 259 outbound).

Trip Distribution and Assignment

The trip distribution and assignment for traffic from the Project Site is based on the SANDAG model. SANDAG model runs, that isolated trips to and from the Traffic Analysis Zone that contains the Project Site, were used to develop a regional distribution and assignment. This assignment was further refined, at a local level, based on consultation with the City of Carlsbad and City of Oceanside staff.

The Project Site trip distribution is illustrated in Figure 9. As indicated, the trip distribution applied for the Project Site traffic is:

- 20% to/from the north
- 26% to/from the south
- 24% to/from the east
- 11% to/from the west
- · 19% trips from within the local Study Area

Traffic volume projections from the Robinson's-May building are illustrated in Figures 10, 11, and 12.

Street Segments - Peak Hour Analysis

Existing Baseline street segment peak hour analysis was conducted for all of the street segments in the City of Carlsbad jurisdiction and the two segments under the City of Oceanside jurisdiction that are projected to operate at LOS D. As shown in Table 17, all of the 10 street segments in the City of Carlsbad are projected to operate at LOS D or better, during both the morning and afternoon peak hours. However, both of the street segments in the City of Oceanside are projected to operate at LOS E or F during both peak hours. The City of Oceanside's standard for an acceptable LOS for peak hour street segment operations is LOS D. Detailed worksheets for the street segments in the City of Oceanside are provided in Appendix E.

PROJECT TRIP GENERATION AND TRAFFIC PROJECTIONS

Trip Generation

Similar to the Robinson's-May building, trip generation estimates for the Project were developed using trip generation rates those identified for a 'Super Regional Shopping Center' land use in the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*. Table 18 provides a summary of the trip generation rates and estimates for the development proposed under the Project. As shown in the table, it is estimated that the Project would generate a total of 1,240 net new daily trips on a typical weekday, including approximately 49 morning peak hour trips (35 inbound, 14 outbound) and 124 afternoon peak hour trips (62 inbound, 62 outbound). These estimates are conservative in that they do not account for trip reductions from pass-by trips.

Project Circulation

Access to the land uses north of Marron Road would be the same as those under Existing Conditions. The existing cinema on the parcel south of Marron Road currently has access to parking via a right-turn only driveway just west of the intersection of El Camino Real & Marron Road. Access to the new retail proposed to be built on this parcel as part of the Project would
